The following Management's Discussion and Analysis (MD&A) of the financial condition and results of operations of Pulse Seismic Inc. ("Pulse" or "the Company") for the year ended December 31, 2019 was prepared taking into consideration information available to February 12, 2020 and is supplemental to the audited consolidated financial statements and related notes for the year ended December 31, 2019. Throughout this MD&A reference will be made in the text and tables to "2019", which refers to the year ended December 31, 2019, and to "2018", which refers to the year ended December 31, 2018.

The consolidated financial statements were prepared in accordance with International Financial Reporting Standards (IFRS) with comparative figures for the prior year. Certain comparative figures have been reclassified to conform to the current year's presentation. The consolidated financial statements and the MD&A were reviewed by Pulse's Audit and Risk Committee and approved by Pulse's Board of Directors. All financial information is reported in Canadian dollars. This MD&A discusses matters which Pulse's management considers material. Management determines whether information is material based on whether it believes a reasonable investor's decision whether or not to buy, sell or hold shares in the Company would likely be influenced or changed if the information were omitted or misstated. Readers should also read the cautionary statement in "Forward-Looking Information".

## OVERVIEW

### ABOUT PULSE

Pulse is a market leader in the acquisition, marketing and licensing of two-dimensional (2D) and three-dimensional (3D) seismic data for the energy sector in Western Canada. Seismic data is used by oil and natural gas exploration and development companies to identify portions of geological formations that have the potential to hold hydrocarbons. Seismic data is used in conjunction with well logging data, well core comparisons, geological mapping and surface outcrops to create a detailed map of the Earth's subsurface at various depths.

Pulse owns the largest licensable seismic data library in Canada, currently consisting of approximately 65,310 net square kilometres of 3D seismic and 829,207 net kilometres of 2D seismic. The library extensively covers the Western Canada Sedimentary Basin (WCSB), where most of Canada's oil and natural gas exploration and development occur.

Pulse calculates net kilometres of 2D data and net square kilometres of 3D data by multiplying the number of kilometres of seismic data in each 2D line and the number of square kilometres of seismic data in each individual 3D seismic dataset by Pulse's percentage of ownership in each.

### SEISMIC DATA

Seismic data is an essential part of the oil and natural gas exploration and development process. Companies engaged in oil and natural gas exploration and development use seismic data to assist in exploring for and developing new reserves and in establishing the extent of existing reserves. In acquiring seismic data, acoustical energy waves are transferred from an energy source at or near the surface of the Earth to the subsurface. The seismic waves reflect off various geological beds or strata in the Earth's subsurface. Sophisticated sensors and recording instruments at the surface collect the reflected waves and convert them to digital form. The data is subsequently processed and an image of the subsurface formations is created, providing explorationists with valuable data on the potential of a particular area to yield oil or natural gas reserves, and assisting in the selection of drilling locations.

### 2D SEISMIC

2D seismic data is measured in linear kilometres and after processing provides a sectional illustration of geological formations directly below the line on which the data was acquired. 2D seismic can extend over a distance spanning many kilometres. Intersecting 2D lines can enable explorers to map large pools of oil and natural gas, but without the precision required for smaller or more complex targets. Exploration companies typically use 2D seismic to get a sense of the regional geology of an area they think is prospective for oil and natural gas. 2D seismic data continues to be used to generate regional leads and prospects in oil and natural gas exploration areas.

### 3D SEISMIC

3D seismic data is measured in square kilometres and after processing provides map-like overhead views as well as three-dimensional visualizations of the subsurface geology. 3D seismic data is shot in grids, generating a three-dimensional image of the subsurface. 3D seismic data enables a more precise definition of geologically complex targets, facilitating precise placement of oil and natural gas wells. 3D seismic is generally used to zero-in on a discrete area of geological interest initially identified with 2D seismic. 3D seismic data is particularly important for horizontal drilling, unconventional plays (such as shale gas and tight sands) and complex conventional drilling. Typical 3D seismic surveys cover an area anywhere from a few square kilometres to several hundred square kilometres.

## MISSION AND STRATEGY

Pulse is a pure-play seismic data library company focused on the acquisition, marketing and licensing of seismic data to the western Canadian oil and natural gas sector. The Company's business model is designed to generate a growing stream of cash flow by repeatedly licensing the data in its seismic data library to oil and natural gas companies. Pulse's strategy is to pursue growth opportunities that meet its financial and technical criteria while maintaining a low cost structure.

Current seismic processing and visualization software allows historical 2D and 3D data to be reprocessed and reinterpreted, thereby maintaining the technical usefulness and marketability of historical data and, through repeated licensing sales, generating recurring revenue. The Company is continuously seeking and evaluating opportunities to expand its data library by acquiring high-quality 2D and 3D datasets that cover some of western Canada's most prospective current exploration regions, are complementary to its current library, and are available at favourable valuations. This is accomplished in two ways. Pulse purchases proprietary rights to complementary 2D and 3D seismic datasets when the opportunity arises, and it partners with customers on surveys for new 3D seismic data. Participating customers are provided with a licensed copy while Pulse retains proprietary rights to the seismic data acquired. Pulse uses Company personnel to market and manage participation surveys, and subcontracts field acquisition activities to third parties.

## ECONOMIC ENVIRONMENT AND SEISMIC INDUSTRY

Pulse has been successful throughout prior commodity price cycles, due to its low cost structure and ability to generate a high level of shareholder free cash flow relative to revenue. Shareholder free cash flow is a non-GAAP measure that the Company considers important in evaluating its financial performance.

Pulse's success depends on its ability to provide seismic coverage over the geographical areas associated with certain geological development areas or "play types" that the exploration and development sector focuses on in a given period. Activity in various plays is driven by commodity prices, geological understanding, the economic application of available and improving technologies and the availability of oil and natural gas processing and transportation egress ("take-away") capacity at reasonable cost. Pulse has worked diligently through the years to enlarge its coverage.

The oil and natural gas exploration and development industry targets natural gas reservoirs that are high in natural gas liquids and crude oil, lying in unconventional shale and less-permeable or tight formations. 2D and 3D seismic data are important tools for these plays. 2D seismic data is used to map the regional faults in shale gas prospects and 3D seismic data is used to map the exact contours of variable reservoirs, as well as small-scale fractures in shale formations, to plan accurate paths for horizontal wells.

Pulse's business results depend to a large extent on the level of capital spending on exploration activities by oil and natural gas companies. A sustained increase or decrease in the price of natural gas or crude oil, therefore, which could have a material impact on exploration activities, could also materially affect the Company's revenue, financial position, results of operations, cash EBITDA and shareholder free cash flow. The relationship is not direct, however, and the Company has generated high revenue in periods of weak oil and natural gas prices and vice-versa.

## KEY PERFORMANCE INDICATORS

The key performance indicators used by Pulse's management to analyze business results are seismic data library sales, net earnings, cash EBITDA and shareholder free cash flow. The definitions, calculations and reconciliations of cash EBITDA and shareholder free cash flow to the nearest GAAP financial measures are provided in "Non-GAAP Financial Measures and Reconciliations".

Results for the key performance indicators for the three months and year ended December 31, 2019, with comparative figures for 2018, are set out in the following table:

(thousands of dollars except per share data)	Three months ended December 31,			Years ended December 31,		
	2019	2018	Variance	2019	2018	Variance
Data library sales	<b>5,281</b>	4,286	995	<b>23,635</b>	10,076	13,559
Other revenue	<b>83</b>	27	56	<b>520</b>	112	408
Total seismic revenue	<b>5,364</b>	4,313	1,051	<b>24,155</b>	10,188	13,967

Per share basic and diluted	<b>0.06</b>	0.05	0.01	<b>0.25</b>	0.09	0.16

In the first quarter of 2019, Pulse acquired 100 percent of the shares of Seitel Canada Ltd. (Seitel), a seismic data library company. For the three months ended December 31, 2019, Pulse generated \$5.4 million of revenue, including \$1.9 million from the data library acquired from Seitel, compared to \$4.3 million for the same period in 2018. In 2019, Pulse generated \$24.2 million of revenue, including \$13.4 million from the data library acquired from Seitel, compared to \$10.2 million in 2018, an increase of 137 percent year-over-year. In addition to data library sales, Pulse has other revenue included in total revenue. This includes revenue from client services consisting of copy and reproduction charges, as well as data storage fees related to the leased warehouse that was acquired with the Seitel purchase.

In 2019, traditional data library sales increased by 115 percent to \$19.6 million from \$9.1 million in 2018. Since the end of 2014, the Company has experienced low traditional data library sales, due to the ongoing low level of capital spending in the energy-producing sector. Traditional data sales in 2019 were increased through the additional data acquired early in the year.

The increase in data library sales resulting from the recent acquisition is the main factor contributing to the year-over-year improvements in the Company's key performance metrics of cash EBITDA and shareholder free cash flow. The difference between cash EBITDA and shareholder free cash flow in both of the 2019 periods is explained primarily by the Company's debt servicing obligations due to the borrowing incurred for the recent acquisition, and to its exposure to income tax during periods in which it generates earnings.

The second quarter's revenue included a \$7.0 million sale to an intermediate oil and natural gas producer.

## ACQUISITION OF SEITEL CANADA LTD.

On January 15, 2019 the Company acquired 100 percent of the shares of Seitel Canada Limited (Seitel) for initial cash consideration of \$53.6 million paid at closing plus potential additional payments of up to \$5 million, in the aggregate, within two years of closing. Pulse also assumed an estimated \$4.2 million in additional future liabilities.

The acquisition more than doubled the size of the Company's seismic data library, making it the largest provider of licensable seismic data to the oil and natural gas industry in the Western Canada Sedimentary Basin.

The assets of Seitel, a privately held company, consisted primarily of its 2D and 3D seismic data library in Western Canada. The newly acquired seismic data library includes approximately 36,354 net square kilometres of 3D data and 379,207 net kilometres of 2D data. Pulse more than doubled its 3D library to be the owner of approximately 65,310 net square kilometres and nearly doubled the 2D library to approximately 829,207 net kilometres. The acquisition was completed pursuant to the terms of a share purchase agreement dated January 15, 2019.

The newly acquired seismic data is unique and complementary to Pulse's data, with minimal overlap in the most valuable asset, the 3D library, and only a small percentage of overlap in the 2D library.

The initial consideration of \$53.6 million was paid in cash and financed by a combination of Pulse's cash on hand of \$20.6 million and \$33.0 million of debt. In connection with the acquisition, Pulse amended and restated its syndicated credit agreement with the Toronto-Dominion Bank and ATB Financial. The facilities were comprised of \$15 million in term debt, all of which was utilized for the acquisition, and a \$30 million revolving facility, \$8 million of which was drawn for the acquisition. There is also a \$25 million accordion feature which allows the Company to increase the facility's size up to \$70.0 million, subject to the lenders' consent. The facility contains favourable repayment terms, interest rates and financial covenants.

Further, Pulse has also entered into a five-year subordinated debt agreement with EdgePoint Investment Group Inc. for an additional \$10 million. The agreement terms and conditions are competitive, market-based terms and conditions. The agreement has no requirement to repay the principal prior to the end of term.

The balance of up to \$5 million was a deferred payment that was paid during 2019, at a rate representing 50 percent of the 2019 sales revenue generated from the former Seitel database.

To complete the financing of the acquisition, Pulse incurred \$73,000 of financing costs as of December 31, 2018 which were deferred and, starting in January 2019, are being amortized over the duration of the term debt. The Company also incurred \$85,000 of transaction costs as of December 31, 2018. These costs include professional fees related to the settlement of the acquisition. The costs were capitalized and increased the total cost of the acquisition.

## SEISMIC REVENUE FLUCTUATIONS

Revenue fluctuations are a normal part of the seismic data library business, and data library sales can vary significantly year-over-year. As stated, the increased amount of data available for licensing since the 2019 acquisition affects the year-over-year results in this case.

Traditional data library sales can occur at any time. This is due to the nearly continual changes in oil and natural gas industry conditions, sudden or increased demand for seismic data covering a specific area or play, and the timing of public offerings of petroleum and natural gas rights (land sales).

Transaction-based sales can also occur at any time. This is due to corporate merger-and-acquisition, joint venture and asset disposition activity involving Pulse's customers, which is unpredictable.

## OUTLOOK

Financial results for the first year following the acquisition of Seitel confirmed the belief that the Company's sales opportunities would be doubled. Traditional data library sales in 2019 was in fact double the average of the last four years, and there was also modest year-over-year growth in sales of the combined data libraries. The Company does remain very cautious about the year ahead, even with certain recent events on the political, regulatory and legal fronts that are positive for the industry's medium- to longer-term prospects.

The Company considers the following relevant:

- The recently re-elected Liberal federal government stated its support for the Trans Mountain Pipeline expansion. While some Indigenous court challenges may continue, in January the Supreme Court of Canada unanimously rejected British Columbia's appeal of court rulings rejecting the province's attempt to control what commodities are contained in inter-provincial pipelines traversing B.C., in order to prohibit heavy crude oil and halt the project. Following this, B.C. premier John Horgan signalled that he would no longer oppose construction. Then on February 4, Canada's Federal Court of Appeal dismissed a challenge to the government's approval of the pipeline expansion, clearing some more uncertainty over the project. Trans Mountain had resumed construction on its Alberta leg last fall. The planned near-tripling of capacity to 839,000 bbls per day is critical for the producing sector to access Pacific Rim markets;
- The \$8 billion, 830,000-bbl-per-day Keystone XL pipeline project into the U.S. heartland continues to move forward. Last August the project received court approval critical to its routing through Nebraska. In mid-January project owner TC Energy Corp. announced that it intends to build the short but critical Canada-U.S. border crossing in April, and by summer to commence construction in Montana, South Dakota and Nebraska;
- Enbridge Inc.'s Line 3 Replacement, an approximately \$9 billion project to replace aging pipeline connecting Alberta to the U.S. Midwest, has continued to make significant progress. The Canadian portion of the project entered service last year, and the remaining U.S. portion in Minnesota last year received a number of favourable court rulings. Construction there could start in the second half of this year, with the entire line shipping oil by early to mid-2021. The line replacement will increase export capacity from less than 400,000 bbls per day at present to a planned initial 790,000 bbls per day;
- Significant progress continues to create a liquefied natural gas (LNG) export industry. Construction of the landmark LNG Canada facility at the port of Kitimat, B.C., is well underway. While the associated gas supply pipeline for the combined \$40 billion project remains embroiled in controversy, all elected Indigenous governments along its route support construction, and premier Horgan is also a strong supporter. The smaller, \$1.6 billion Woodfibre LNG project at the port of Squamish, B.C., received key provincial approval last July, opening the way to construction this year. And the proposed Chevron-Woodside Kitimat LNG project also made progress, with the project partners applying to nearly double annual export capacity to 18 million tonnes (although Chevron later announced its intention to exit the project). Combined, the three projects would move a material proportion of Western Canada's natural gas production to global markets, accessing stronger pricing;
- Alberta's new United Conservative Party government, after moving expeditiously to enact business-friendly policies, including a phased reduction of 33 percent to Alberta's corporate income tax, and to reduce the regulatory burden on the oil and natural gas industry, is vigorously promoting energy development and pushing back against the international campaign to "landlock" Alberta's energy production;
- The UCP government is extending the policy of oil production "curtailment" through 2020. Begun in late 2018, curtailment aims to ease the high price differential between the West Texas Intermediate (WTI) North American benchmark and the Western Canadian Select (WCS) regional benchmark crude. This is mainly caused by insufficient oil export capacity, increasing oil storage levels and driving down the intra-Alberta oil price, severely reducing the producing sector's revenue. Curtailment has been highly successful in narrowing the differential. For 2020, the production cutoff for smaller producers exempt from curtailment was doubled to 20,000 bbls per day, expected to encourage investment, drilling and growth among smaller producers; and
- Oil shipments by rail are forecast to continue increasing throughout the year, to as high as 600,000 bbls per day, enabling more oil to exit the producing region and further easing the need for curtailment.

Traditional industry indicators generally remain on the weaker side, though with some positive elements:

- In late January, the Canadian Association of Petroleum Producers (CAPP) forecast that non-oil-sands oil and natural gas capital investment will increase by 4 percent to \$25.4 billion in 2020, marking the first year-over-year increase in five years. CAPP attributed the planned spending increases to Alberta's corporate tax cut and easing of production curtailment;
- Also in late January, the Petroleum Services Association of Canada revised its 2020 drilling forecast to 4,800 wells, up by 7 percent from its previous forecast, although the increased figure still represents a year-over-year decline of 2 percent from the very weak 2019 level;
- In November, the Canadian Association of Oilwell Drilling Contractors forecast 4,905 wells to be drilled in 2020, virtually unchanged from 2019;
- Mineral lease auctions or "land sales" in B.C. and Alberta, traditionally a leading indicator of oil and natural gas field activity, were only \$134 million in 2019 (vs. \$469 million in 2018);
- Natural gas prices are expected to recover slightly from the very low levels of the past two years, with GLJ Petroleum Consultants Ltd. currently forecasting monthly 2020 pricing of US\$1.32-US\$1.81 per mmBtu at Alberta's AECO "C" hub (converted to U.S. dollars for easier comparison);
- Crude oil prices are expected to increase year-over-year and maintain moderate strength, with GLJ forecasting an average WTI price of US\$61.00 per bbl in 2020, up from US\$56.98 per bbl in 2019; and
- Of even greater importance for Canadian producers, the WTI-WCS differential is forecast by GLJ to be in the range of US\$16-\$18 per bbl in 2020, considered a moderate level.

Entering 2020 Pulse's strengths and advantages include:

- Ownership of the largest licensable seismic dataset in Western Canada, providing exceptional exposure to any rebound in industry activity;
- A low cost structure, with only a modest increase in SG&A expenses as a result of the Seitel acquisition, as well as relatively low interest expense, thereby providing even greater cash flow and margin leverage than in the past;
- A strong cash margin, cash EBITDA and shareholder free cash flow generated on the 2019 sales level;
- Moderate debt levels on favourable terms. The Company is confident in its ability to pay down debt at the schedule and rate specified. Pulse has unused borrowing capacity of up to a further \$22.1 million if needed;
- An experienced, proven and efficient team of senior management and employees; and
- An experienced and supportive Board of Directors.

Over the coming quarters Pulse intends to continue paying down debt, to manage costs conservatively and to remain stringent in assessing potential new opportunities. The broad coverage of its seismic database make Pulse's revenue, cash margin and shareholder free cash flow highly levered to any uptick in industry field activity and demand for seismic data. In summary, Pulse is equally well-positioned to weather additional quarters of weaker industry activity, to benefit from an industry rebound, to use a sudden increase in sales to the benefit of its shareholders, or to act on further opportunities to grow its seismic data library.

## DISCUSSION OF OPERATING RESULTS

SUMMARY FOR YEAR ENDED DECEMBER 31, 2019

### LOSS BEFORE INCOME TAXES

Pulse incurred a loss before income taxes of \$2.2 million (\$0.04 per share basic and diluted) in 2019 compared to a loss before income taxes of \$2.4 million (\$0.04 per share basic and diluted) for 2018.

## DATA LIBRARY SALES

Data library sales are conducted under various types of sale contracts. These are classified as data library sales, library cards (discount agreement, paid on predetermined payment terms with periods of up to one year to select data), commitment cards (discount agreement, paid when data is selected and delivered within a one-year period) and review-and-possession agreements (client is provided with data to review and selects a portion of this data to license long-term, with the agreement often having set payment terms). Pulse plans to continue providing customers with a variety of contract options in order to maximize future data library sales. The unearned portion of a contract's value is deferred until Pulse's revenue recognition criteria are met, with data library sales revenue being recognized upon delivery of seismic data to the customer.

Data library sales consist of traditional sales and transaction-based sales. There are three main types of transaction-based sales: corporate merger or acquisition sales, partnership or joint venture sales, and asset disposition-related sales. For further information on transaction-based sales, see "Traditional Sales vs. Transaction-based Sales: Eight-Year History" on page 16.

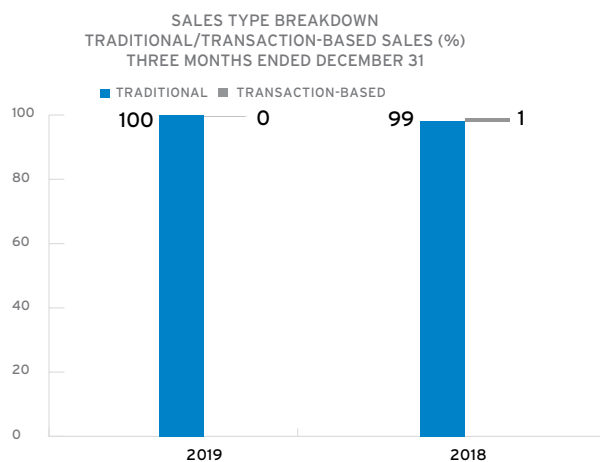

For 2019, seismic data library sales were \$23.6 million compared to \$10.1 million in 2018. Actual data sales for 2019 were \$24.0 million, but sales revenue of approximately \$374,000 was deferred as a result of the extended payment terms for a portion of the \$7.0 million sale recorded in the second quarter of 2019 and another sale made in November. The \$374,000 will be recorded as interest income between the date of each sale and the collection of the payments in 2021 and 2022.

As explained above, the year-over-year increase in the data library sales is the result of the Seitel acquisition in January 2019.

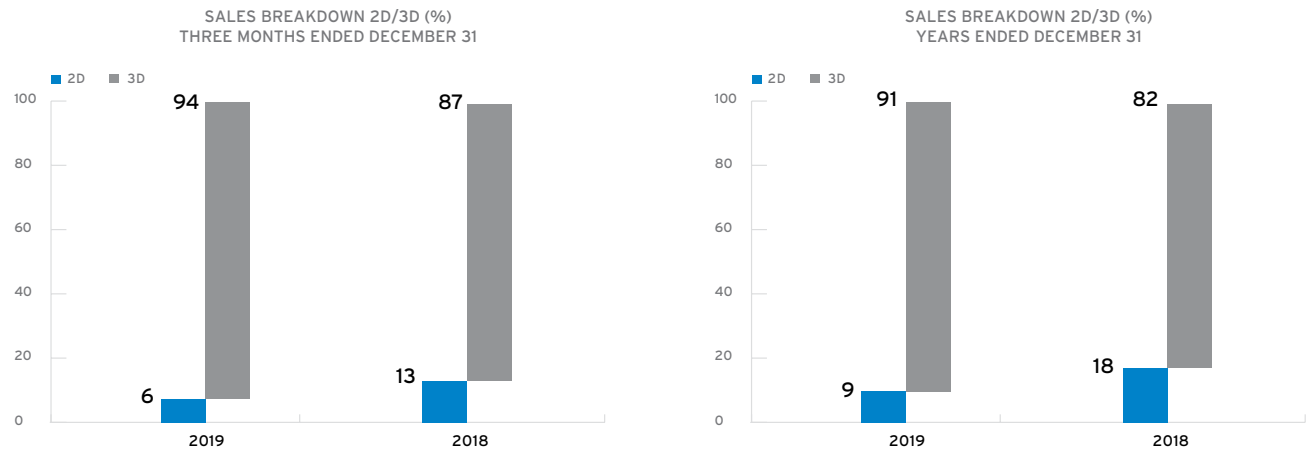

### DISAGGREGATED DATA LIBRARY SALES BREAKDOWN

Pulse uses three ways to disaggregate its data library sales. The following graphs illustrate the comparative disaggregated sales for the three-and twelve-month periods ended December 31, 2019 and 2018.

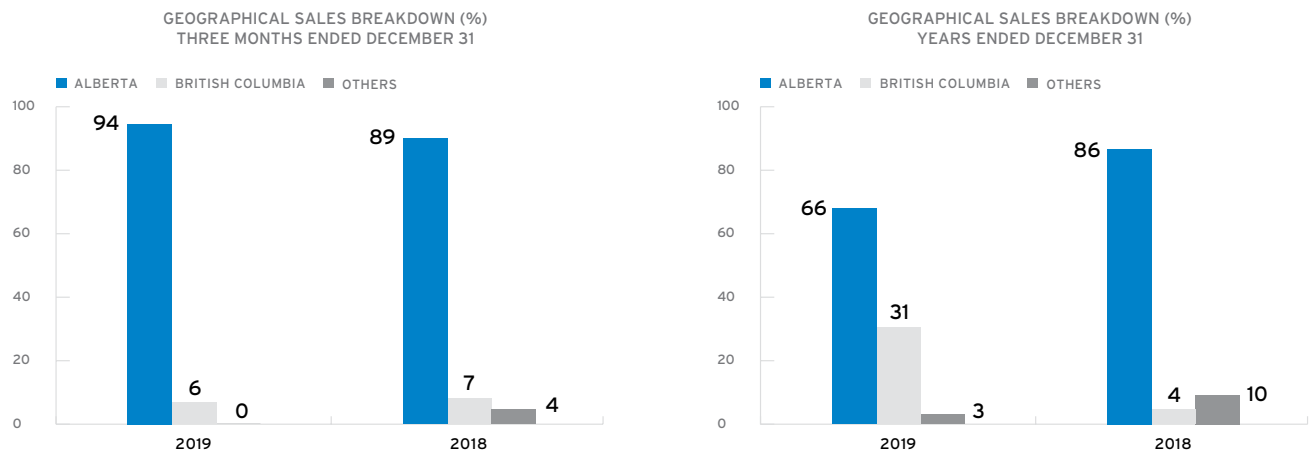

The first breakdown, transaction type, separates sales between traditional and transaction-based sales. These two types fluctuate greatly from period to period and year to year. An eight-year historical breakdown is provided in the "Traditional Sales vs. Transaction-Based Sales: Eight-Year History" section on page 16.

The second breakdown, data type, compares sales of 2D and 3D seismic data. As 3D seismic licence contracts are generally larger than 2D seismic licence contracts, the percentage of seismic data library revenues generated from 2D and 3D seismic data can fluctuate significantly depending on the number of 3D seismic sale contracts signed during a given period.

The third breakdown is geographical. The largest proportion of data sales usually comes from data in Alberta, as that is where the majority of Pulse's data coverage and current industry activity are. The \$7.0 million deal in the second quarter of 2019 was for data located in British Columbia.

The Company's customers are currently and generally focusing on liquids-rich natural gas and light oil pools found primarily in a broad corridor running from northwest of Calgary, Alberta, along the Foothills of the Rocky Mountains to the British Columbia border, as compared to "dry" natural gas more often found in British Columbia, on Alberta's eastern prairies and in Saskatchewan and Manitoba. During the year ended December 31, 2019, 66 percent of the data library sales were from data located in Alberta, 31 percent from British Columbia and 3 percent from other areas.

#### AMORTIZATION OF SEISMIC DATA LIBRARY

Seismic data library amortization expense was \$14.2 million for 2019 compared to \$7.3 million in 2018. The significant increase is due to the amortization expense related to the data library acquired in January 2019.

Amortization of the seismic data library is described further under "Critical Accounting Estimates".

## SALARIES, COMMISSIONS AND BENEFITS (SCB)

SCB includes salaries, related benefits, incentive compensation and internal commissions. For 2019, SCB was \$4.3 million, an increase of \$862,000 from \$3.5 million in 2018.

The significant increase is due to the success-based acquisition bonus of \$700,000 paid to the Pulse employees for the completion and closing of the acquisition of Seitel, as well as an increase in sales commissions due to higher sales and, finally, to the increase in the accounting expense related to the employee long-term incentive plan resulting from the increase in the share price between January 1 and December 31, 2019.

## OTHER SELLING, GENERAL AND ADMINISTRATIVE COSTS (SG&A)

SG&A includes external commissions, occupancy costs, office and general costs, information technology expenses, reprocessing, data storage expenses, directors' fees and corporate costs, consulting fees and professional fees. For both 2019 and 2018 SG&A was \$2.0 million. In 2019, the Company recorded a bad debt expense of \$180,000 for an account considered to be at high risk for collection. This expense was offset by a reduction in occupancy costs which was a result of the accounting change due to IFRS 16, *Leases*. In IFRS 16, the operating cost portion of rent on the office lease is classified as an expense in SG&A, while the basic rent component is reflected as a combination of interest expense and depreciation.

## RESTRUCTURING COSTS

Included in restructuring costs is \$1.5 million of severance payments related to the acquired company in January 2019, the audit fees related to regulatory reporting of the Seitel acquisition, expenses related to the Seitel warehouse lease, increased marketing costs from the assumption of the lease contract for a suite at the Scotiabank Saddledome until the end of the third quarter of 2019, and other minor SG&A expenses related to Seitel integration. These additional costs have been categorized as restructuring costs and make up part of the expected \$4.2 million in future liabilities as outlined in previous acquisition-related disclosure.

## NET FINANCING COSTS (INCOME)

In 2019, the Company's net financing costs were \$2.5 million compared to \$318,000 of net financing income in 2018. The increase is related to the debt utilized to fund the acquisition. In January 2019, in connection with the acquisition, Pulse amended and restated its syndicated credit agreement with the Toronto-Dominion Bank and ATB Financial. The credit facility is comprised of \$15 million in term debt, all of which was utilized for the acquisition, and a \$30 million revolving facility, of which \$8 million was also drawn for that purpose.

Pulse also entered into a five-year subordinated debt agreement with EdgePoint Investment Group Inc., a non-arm's-length party, for \$10 million. The agreement has no requirement to repay the principal prior to the end of term. In 2019, the interest expense related to the syndicated credit agreement was \$1.1 million and the interest expense related to the subordinated debt agreement was \$959,000. Also included in the financing expenses is the interest related to the lease liabilities following the implementation of IFRS 16, *Leases*, in the first quarter of 2019.

By comparison, in 2018, there was zero long-term debt owing and the Company incurred only standby fees on its syndicated credit agreement. The standby fees were offset by the interest earned by the Company on its cash surplus.

## INCOME TAXES

The income tax expense in 2019 was \$1.2 million, even though the Company incurred a loss before income tax of \$2.2 million. The main factor affecting the tax rate calculation is the permanent difference between the tax basis and the accounting value of the data library acquired in January 2019. In 2018, the Company recorded an income tax reduction of \$678,000 and had an effective tax rate for accounting of 28.2 percent. A reconciliation of the income tax expense or reduction is included in note 9 of the consolidated financial statements.

The federal-provincial enacted corporate income tax rate was 27 percent in 2018 and will be an average of 26.5 percent in 2019, due to phased reductions to the corporate income tax rate levied by the Province of Alberta. The effective tax rate for accounting in 2019 was different from the enacted income tax rate as a result of the permanent difference

between the tax basis of the data library acquired in 2019 and its cost. The change in valuation allowance related to future resource deductions and non-deductible expenditures also contributed slightly to the variance between the effective and the enacted income tax rate.

#### SUMMARY FOR THREE MONTHS ENDED DECEMBER 31, 2019

##### **EARNINGS (LOSS) BEFORE INCOME TAXES**

For the three months ended December 31, 2019, the Company incurred a loss before income taxes of \$432,000 (\$0.00 per share basic and diluted) compared to earnings before income taxes of \$1.4 million (\$0.03 per share basic and diluted) for the comparable period of 2018.

##### **REVENUE**

Total revenue for the three months ended December 31, 2019 was \$5.4 million compared to \$4.3 million for the three months ended December 31, 2018.

##### **AMORTIZATION OF SEISMIC DATA LIBRARY**

For the three months ended December 31, 2019, seismic data library amortization expense was \$3.5 million compared to \$1.8 million in the comparable period of 2018. The significant increase is due to the amortization expense related to the data library acquired in January 2019.

Amortization of the seismic data library is described further under "Critical Accounting Estimates".

##### **SALARIES, COMMISSIONS AND BENEFITS (SCB)**

SCB for the three months ended December 31, 2019 was \$868,000 compared to \$707,000 in the comparable period of 2018. The increase is mainly due to the increase in the accounting expense related to the employee long-term incentive plan resulting from the increase in the share price between January 1 and December 31, 2019.

##### **OTHER SELLING, GENERAL AND ADMINISTRATIVE COSTS (SG&A)**

SG&A for the three months ended December 31, 2019 was \$592,000 compared to \$470,000 for the three months ended December 31, 2018. As explained above the increase was mainly related to a \$180,000 bad debt expense recorded in the three month period ended December 31, 2019 offset by the impact of IFRS 16 as noted above.

##### **NET FINANCING COSTS (INCOME)**

For the three months ended December 31, 2019, net financing costs were \$526,000 compared to \$72,000 net financing income for the same period in 2018. The difference is related to the debt utilized to fund the acquisition. During the same period in 2018, there was zero long-term debt owing and the Company incurred only standby fees on its syndicated credit agreement. The standby fees were offset by the interest earned by the Company on its cash surplus.

##### **INCOME TAXES**

The income tax expense for the three months ended December 31, 2019 was \$327,000 compared to an income tax expense of \$355,000 for the fourth quarter of 2018. The Company recorded an income tax expense for the three months ended December 31, 2019 even though it incurred a loss before income tax of \$432,000. The main factor affecting the tax expense is the permanent difference between the tax basis and the accounting value of the data library acquired in January 2019.

## REVIEW OF FINANCIAL POSITION

AS AT DECEMBER 31, 2019

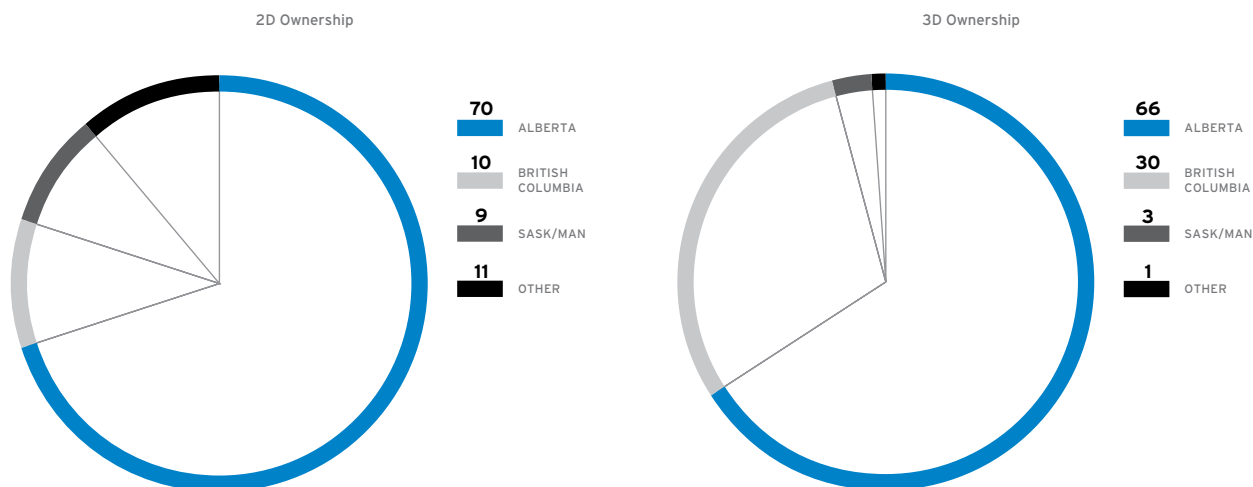

### SEISMIC DATA LIBRARY

The Company's business model includes seismic data library growth as a priority. Pulse has historically acquired seismic data to add to its library through two main methods. When opportunities arise that meet the Company's criteria, proprietary rights to complementary seismic datasets may be purchased, or participation surveys may be conducted. For participation surveys, Pulse partners with customers to conduct surveys from which the seismic data collected is added to Pulse's data library to generate future licensing revenue. Pulse retains full ownership of the data, and participating customers are provided with a licensed copy in return for their contribution to the capital costs of the survey. The Company has not conducted a survey since the oil and natural gas industry downturn began in 2015.

At December 31, 2019, the Company considered indicators of impairment for each of its cash-generating units and, based on that review, no impairment test was performed.

Additionally, as discussed above in the Corporate Update, on January 15, 2019 the Company acquired Seitel and more than doubled its seismic data library.

The breakdown of Pulse's 2D and 3D seismic data by geographical location is as shown in the following graphs.

### LONG-TERM RECEIVABLES

In June 2019 the Company closed a \$7.0 million seismic data sale. It had payment terms with \$3.0 million due and collected in July 2019, \$2.0 million due in January 2020 and \$2.0 million due in January 2021. The payment due in January 2021 is presented as a long-term receivable in the statement of financial position. For this reason, that payment was discounted and \$183,000 of the data library sale will be recognized as interest income over time until the payment is received in January 2021.

In November 2019 the Company closed a \$3.4 million seismic data sale. It also had payment terms, with \$140,000 due and collected in December 2019, \$1.1 million due in 2020, \$1.1 million due in 2021 and \$1.1 million due in 2022. The payments due in January 2021 and 2022 are presented as a long-term receivable in the statement of financial position. For this reason, those payments were discounted and \$191,000 of the data library sale will be recognized as interest income until the payments are received in 2021 and 2022.

## RIGHT-OF-USE (ROU) ASSETS

Included in the ROU assets are the present values of the basic rent related to Pulse's office lease agreement and the former Seitel warehouse lease agreement. The present values were calculated using an incremental borrowing rate of 6.7 percent. The operating costs associated with the lease agreements were not included as those costs are not fixed or based on an index or rate.

The office lease agreement terminates in March 2023 and the warehouse lease agreement terminates in April 2022.

As stated above, no fair value was allocated to the ROU asset related to the former Seitel office space. This office was not required for business by Pulse and was immediately marketed for sublease. The office lease agreement terminates in November 2022. Given market conditions for commercial office space in downtown Calgary at the time of acquisition, the probability of a sub-lease was considered low. Since that time, in the third quarter of 2019 a sub-lease for the remainder of the term of the acquired office space was finalized, which have led to a recovery of a portion of the monthly lease operating costs.

## LONG-TERM DEBT

As described in "Net Financing Costs (Income)" above, the acquisition of Seitel was partially funded through debt. A total of \$23.0 million was borrowed from Pulse's syndicated credit facility and a \$10.0 million subordinated debt facility was arranged.

Additionally, Pulse agreed to pay the vendor a potential deferred payment of up to \$5.0 million, to be paid at a rate representing 50 percent of the sales revenue generated from the former Seitel database until December 31, 2020. Based on sales in the first half of 2019, payments were made in April and July to fully satisfy this obligation.

The current portion of long-term debt consists of the annual mandatory principal repayment of \$1.5 million related to the syndicated credit facility.

The non-current portion of the long-term debt is offset by deferred financing charges to be amortized over three years.

## LEASE LIABILITIES

Included in lease liabilities are the present values of the basic rent related to Pulse's office lease agreement, the lease agreement for Seitel's former office space and the warehouse lease agreement, all calculated using an incremental borrowing rate of 6.7 percent. The operating costs included in the lease agreements were not included in the lease liabilities as these costs are not fixed or based on an index or rate.

## OTHER LONG-TERM PAYABLE

Included in the other long-term payable is the long-term portion of the cash-settled liability related to the long-term incentive plan.

## SHARE CAPITAL SUMMARY

The Company's authorized share capital consists of an unlimited number of common shares and an unlimited number of preferred shares, issuable in series.

The following table provides details of the Company's outstanding share capital:

	Three months ended December 31,		Years ended December 31,	
	2019	2018	2019	2018
Weighted average shares outstanding:				
Basic and diluted	<b>53,793,317</b>	53,793,317	<b>53,793,317</b>	53,838,106
Shares outstanding at period-end			<b>53,793,317</b>	53,793,317
Shares outstanding at February 12, 2020			<b>53,793,317</b>	

## DILUTED EARNINGS PER SHARE RECONCILIATION

The Company does not have any dilutive securities.

### LONG-TERM INCENTIVE PLAN (LTIP)

The Company has an LTIP for employees, officers and directors designed to align the Company's long-term incentive compensation with its performance and to increase levels of stock ownership. Participants are granted restricted share units (RSUs) and performance share units (PSUs). LTIP awards are at the discretion of the Board of Directors.

RSUs and PSUs have accompanying dividend-equivalent rights and, therefore, additional RSUs and PSUs are issued to reflect dividends declared on the common shares. The plan's trustee will purchase common shares on the open market for the after-tax number of RSUs and PSUs vested with funds provided by the Company.

On March 31, 2019 184,657 RSUs and 248,296 PSUs were eligible to vest. Corporate financial performance in 2018 did not meet the predetermined performance benchmarks and, consequently, no PSUs vested on March 31, 2019. RSUs vest automatically based upon time and, consequently, all the eligible RSUs vested on March 31, 2019.

To satisfy its obligation, in April 2019 the Company provided \$266,000 to the plan's trustee to purchase common shares on the open market for the total after-tax number of cash- and equity-settled RSUs that vested on March 31, 2019. The related withholding taxes of \$191,000 were paid in May 2019 to settle fully the accrued cash-settled portion of the share-based payment liabilities.

At December 31, 2019 there were 553,575 RSUs and 704,962 PSUs outstanding.

At February 12, 2020, total RSUs and PSUs outstanding remain unchanged. On March 31, 2020, a portion of the LTIP awards, RSUs and PSUs, are eligible to vest. The Company's performance in 2019 did not meet the predetermined performance criteria and, consequently, no PSUs will vest on March 31, 2020. RSUs vest automatically based upon time; all of the eligible RSUs of 186,658 units will, therefore, vest automatically on March 31, 2020.

In April 2020, the Company will settle its obligation to deliver the common shares by providing funds to the independent LTIP trustee to purchase the shares on the open market.

### DEFICIT

On December 31, 2019 the Company had a deficit of \$45.0 million, compared to \$41.7 million at December 31, 2018. Included in the deficit are the net loss for the period of \$3.4 million and the IFRS 16, Leases adjustment of \$110,000 following the implementation of the new standard effective January 1, 2019.

### DEFERRED TAX LIABILITY

The net deferred income tax liability was \$1.1 million at December 31, 2019 compared to \$1.7 million at December 31, 2018. The decrease in the deferred income tax liability is mainly due to the decrease in the difference between the tax base of the seismic data library and the carrying amount on the statement of financial position.

The deferred income tax liability consists mainly of taxable temporary differences between the tax base of the seismic data library and the carrying amount on the statement of financial position.

## FINANCIAL SUMMARY OF QUARTERLY RESULTS

(thousands of dollars, except per share data)	2019				2018			
	Q4	Q3	Q2	Q1	Q4	Q3	Q2	Q1
Data library sales	<b>5,281</b>	<b>2,460</b>	<b>10,617</b>	<b>5,277</b>	4,286	1,597	1,905	2,289
Other revenue	<b>83</b>	<b>127</b>	<b>167</b>	<b>143</b>	27	9	36	39
Total revenue	<b>5,364</b>	<b>2,587</b>	<b>10,784</b>	<b>5,420</b>	4,313	1,606	1,941	2,328
Amortization of seismic data library	<b>3,500</b>	<b>3,557</b>	<b>3,577</b>	<b>3,566</b>	1,811	1,812	1,836	1,878
Net earnings (loss)	<b>(759)</b>	<b>(2,861)</b>	<b>2,880</b>	<b>(2,671)</b>	1,024	(1,042)	(1,016)	(696)
Per share – basic and diluted	<b>(0.01)</b>	<b>(0.05)</b>	<b>0.05</b>	<b>(0.05)</b>	0.02	(0.02)	(0.02)	(0.01)

The revenue streams generated by Pulse's operations are data library sales and other revenue. Other revenue includes revenue from client services consisting of copy and reproduction charges, as well as data storage fees related to the leased warehouse that was acquired with the Seitel purchase.

Data library sales consist of traditional sales and transaction-based sales, as described below under "Traditional Sales vs. Transaction-Based Sales: Eight-Year History". See also "Seismic Revenue Fluctuations".

During 2019 and 2018, transaction-based sales contributed to data library sales to varying degrees. The second quarter of 2019 included \$4.0 million in transaction-based sales.

Very little transaction-based sales revenue was generated in the other quarters depicted in the table above.

The significant increase in quarterly amortization expense in 2019 over the preceding four quarters is due to the acquisition in January 2019. As amortization is a non-cash expense, the Company continued to generate positive cash EBITDA and shareholder free cash flow in each quarter.

During the past eight quarters, the fluctuations in net earnings or loss have largely been a function of the corresponding quarterly fluctuations in revenue. For each quarter in 2019, the increased amortization expense, restructuring expenses and financing costs related to the acquisition offset the increased revenue, and contributed to the lower net result.

All financial data included in the table above is presented in Canadian dollars, the Company's functional currency, and was prepared using the adopted IFRS.

## SELECTED ANNUAL FINANCIAL INFORMATION

(thousands of dollars, except per share data)	Years ended December 31,		
	2019	2018	2017
Data library sales	<b>23,635</b>	10,076	43,430
Other revenue	<b>520</b>	112	95
Participation surveys	<b>–</b>	–	–
Total revenue	<b>24,155</b>	10,188	43,525
Net earnings (loss)	<b>(3,411)</b>	(1,730)	15,087
Per share – basic and diluted	<b>(0.06)</b>	(0.03)	0.27
Total assets	<b>69,807</b>	38,847	51,693
Long-term debt	<b>31,511</b>	–	–
Total non-current financial liabilities	<b>32,484</b>	1,766	3,149
Cash dividends per common share	<b>–</b>	–	0.20 <sup>(1)</sup>

<sup>(1)</sup> Special dividend paid in December 2017

For the last three years, total revenue consisted of seismic data library sales and other revenue. In 2017 the Company closed a record \$29.5 million seismic data sale. Seismic data library sales in 2019 and 2018 were lower than in previous years due to drastic cutbacks in the energy-producing sector's capital spending, to lower customer demand and to fewer transaction-based sales, even with the addition of the Seitel assets in 2019.

The Company had net earnings in 2017, compared to a net loss in 2019 and 2018, due primarily to the large transaction-based sale in 2017.

See also "Seismic Revenue Fluctuations".

Total assets decreased from 2017 to 2018 due to amortization of the seismic data library. Total assets increased in 2019, because of the acquisition of Seitel in January 2019.

In December 2017 the Company paid a special dividend of \$0.20 per share. The regular quarterly dividend was suspended in November 2015.

All financial data in the table above is presented in Canadian dollars, which is the Company's functional currency, and was prepared in accordance with IFRS.

## TRADITIONAL SALES VS. TRANSACTION-BASED SALES: EIGHT-YEAR HISTORY

There are three main types of transaction-based sale. The first is the partnership or joint venture, in which an oil and gas asset holder elects to pool its expertise, capital and/or assets with one or more new participants to explore or develop a play. Under the Company's current standard form licensing agreements, any new technical or operational participant that wishes to view or interpret the seismic data must purchase a data licence from Pulse, generally at a discount (usually pre-defined in the initial licensing agreement). Purely financial partners that do not wish to view or interpret the seismic information are exempt.

The second kind of transaction-based sale is a corporate merger or acquisition. In this case, the seismic data is transferred to the new organization. Under the Company's current standard form licensing agreements, the buyer has 30 days to determine whether it would like to pay a change-of-control fee to keep the data or return the data to Pulse.

The third is the sale of an oil and gas asset or group of assets (as well as partial mineral rights to particular zones below the asset-owner's lands). Under the Company's current standard form licensing agreements, the licence is not transferable upon an asset sale. In this case, no rights to the seismic data transfer to the buyer, and there are no terms of payment in the licence agreement. Should the buyer be interested in Pulse's seismic data, it must license the data from Pulse at the regular price. Following this type of transaction, considerable time may pass until a data licensing sale

occurs because the new asset owner may defer development of the particular asset. In addition, the new asset owner may be interested in only portions of the original dataset. The attraction of Pulse's library remains the far lower cost of licensing the data than shooting new seismic over the same area.

The precise terms of individual licence agreements (including those historically used by Pulse and its predecessors and those assumed by Pulse on data acquisitions) can vary greatly. Change-of-control fees and joint venture copy fees may not always be payable, and licence agreements may not always be non-assignable.

## CONTRACTUAL OBLIGATIONS

Pulse's known contractual obligations at December 31, 2019 are comprised of operating leases for certain office spaces and warehouse space, minimum payments under seismic data services contracts and accounts payable and accrued liabilities. The following table reflects the Company's anticipated payment of contractual obligations:

Contractual Obligations (thousands of dollars)	Total	Payments due by period			
		Less than 1 year	1 - 3 years	4 - 5 years	After 5 years
Long-term debt – capital	31,775	1,500	20,275	10,000	–
Long-term debt – interest	6,055	2,023	2,990	1,042	–
Lease liabilities	3,568	1,279	2,213	76	–
Seismic data services contracts	111	111	–	–	–
Accounts payable and accrued liabilities	1,258	1,138	120	–	–
<b>Total contractual obligations</b>	<b>42,767</b>	<b>6,051</b>	<b>25,598</b>	<b>11,118</b>	<b>–</b>

Obligations in the category of seismic data services contracts include geophysical services such as digitization and data storage.

Accounts payable and accrued liabilities at December 31, 2019 include the interest accrual of \$274,000 related to the long-term debt and the accrual of \$315,000 related to the short term and long-term incentive plans.

## LIQUIDITY, CAPITAL RESOURCES AND CAPITAL REQUIREMENTS

At December 31, 2019 Pulse had working capital of \$596,000 and a working capital ratio of 1.11:1. Current liabilities include deferred revenue, a non-cash liability of \$1.9 million which relates to data to be delivered to customers over a contractually specified period.

In 2019 the Company had \$8.6 million of cash provided by operating activities compared to \$3.3 million of cash used in operating activities in 2018. The main contributors to the difference between the two periods are the significantly increased data sales in 2019, the restructuring costs paid in 2019, the lower cash income tax paid in 2019 than in 2018, the higher interest paid in 2019 than in 2018, and the decrease in the net change in non-cash working capital in 2019 from 2018.

To fund the acquisition in January 2019, the Company borrowed a total of \$33.0 million and subsequently borrowed another \$2.5 million on the revolving credit facility. Of total borrowing, \$3.7 million had been repaid as of December 31, 2019.

The Company utilized cash for the following outlays:

- Seismic data purchases and associated cost of \$61.0 million;
- Long-term debt repayments of \$3.7 million;
- Capital lease principal repayments of \$634,000;
- Deferred financing charges of \$387,000;

- Additions of property and equipment for \$439,000; and
- Shares purchased for equity-settles share-based payments of \$266,000.

The cash balance at December 31, 2019 was \$1.4 million.

The credit facilities are comprised of \$13.9 million in term debt and a \$30.0 million revolving facility, of which \$7.9 million is drawn at this date. Up to \$5.0 million of the revolving facility remains available as an operating line of credit. The facility has repayment terms, interest rates and financial covenants that are described below.

Significant terms of the credit facility are:

- Interest on the term debt and the revolving facility is based on the lead lender's prime rate plus 0.25 percent to 2.75 percent, following an eight-tier margin structure based on the Company's total debt to adjusted EBITDA ratio as described below;
- An accordion feature allowing the Company to increase the facility's size by up to an additional \$25 million, subject to the lenders' consent;
- \$1.5 million aggregate annual principal payments on the term debt and the facility, with voluntary prepayments permitted in whole or part at any time, without premium or penalty; and
- Three-year term until January 15, 2022, with an extension of up to one year available on January 15 of every year with the approval of the lenders. If the extension is not granted, any outstanding amounts will be payable on the then-current applicable maturity date.

At December 31, 2019 the Company had \$13.9 million of term debt and a \$7.9 million balance on the revolving credit facility, with \$22.1 million available for future draws. At December 31, 2019 the applicable interest rate on the long-term debt was 4.7 percent (December 31, 2018 - nil).

The credit facility is secured by a charge on all the assets of the Company and its material subsidiaries.

The credit facility also includes the following two financial covenants:

#### 1) MAXIMUM SENIOR DEBT TO ADJUSTED EBITDA RATIO

The senior debt to adjusted EBITDA ratio shall not be greater than 3.50:1 on December 31, 2019 and shall decrease in steps to 3:1 for fiscal quarters ending December 31, 2020 and thereafter.

#### 2) MINIMUM INTEREST COVERAGE RATIO AND MINIMUM FIXED CHARGE COVERAGE RATIO

On any date on which the senior debt to adjusted EBITDA ratio has been lower than 2:1 for two consecutive quarters, the minimum interest coverage ratio, defined as the ratio of adjusted EBITDA to interest expense, shall not be less than 3:1.

On any date on which the senior debt to adjusted EBITDA ratio is equal to or higher than 2:1 for two consecutive quarters, the fixed charge coverage ratio replaces the interest coverage ratio.

The fixed charge coverage ratio is equal to adjusted EBITDA less unfunded capital expenditures, cash taxes and permitted cash distributions divided by the sum of scheduled principal repayments and interest expense paid in cash and shall not be less than 1.2:1.

Senior debt is total debt less subordinated debt. Total debt also includes the potential deferred payment on the acquisition and is determined on a consolidated basis and in accordance with IFRS.

Adjusted EBITDA is to be calculated on a trailing 12-month basis and is defined as earnings or loss before interest, income taxes, depreciation and amortization, plus extraordinary losses, non-cash losses and expense charges, and any other unusual or non-recurring cash charges, expenses or losses consented to by the lenders, less participation survey revenue, extraordinary gains and non-cash gains and income. Adjusted EBITDA is to be adjusted for acquisitions or dispositions to reflect such acquisition or disposition as if it occurred on the first day of such calculation period.

At December 31, 2019 the senior debt to adjusted EBITDA ratio was 1.24:1 and the interest coverage ratio was 7.49:1.

The senior debt to adjusted EBITDA ratio and the interest coverage ratio related to the financial covenant at December 31, 2019 was calculated as follows:

### SENIOR DEBT TO ADJUSTED EBITDA RATIO

(thousands of dollars except ratio)

Senior debt	21,775
Divided by:	
Adjusted EBITDA	17,557
Senior debt to adjusted EBITDA ratio (not to exceed 3.5:1)	1.24

### INTEREST COVERAGE RATIO (ICR)

(thousands of dollars except ratio)

Adjusted EBITDA	17,557
Divided by:	
Interest expense	2,345
ICR (to be at least 3:1)	7.49

The Company was therefore in compliance with the credit facility's covenants at December 31, 2019.

The Company pays interest and a standby fee based on the daily undrawn balance of the credit facility and its total debt to adjusted EBITDA ratio. Interest and standby fees on the syndicated revolving bank loan are calculated based on the syndicate lead lender's prime rate, bankers' acceptance rate or LIBOR, plus an applicable margin based on the covenant ratio of total debt to adjusted earnings before interest, income taxes, depreciation and amortization (adjusted EBITDA). The total debt to adjusted EBITDA ratio at December 31, 2019 was 1.81:1 and the applicable margin and standby fee will be set at the third-level rates specified in the facility.

The interest and standby fee rates are adjusted the day after the covenant's calculation for the previous fiscal quarter is received and approved by the lenders.

The applicable margin and standby fee rate were determined as follows:

Total Debt to Adjusted EBITDA Ratio	Applicable Margin for Canadian Prime Rate Loans	Applicable Margin for Bankers' Acceptances	Standby Fee Rate
Less than or equal to 1:1	0.25%	1.50%	0.3000%
Greater than 1:1 but less than or equal to 1.5:1	0.50%	1.75%	0.3500%
Greater than 1.5:1 but less than or equal to 2:1	0.75%	2.00%	0.4000%
Greater than 2:1 but less than or equal to 2.5:1	1.00%	2.25%	0.5063%
Greater than 2.5:1 but less than or equal to 3:1	1.25%	2.50%	0.5625%
Greater than 3:1 but less than or equal to 3.5:1	1.75%	3.00%	0.7500%
Greater than 3.5:1 but less than or equal to 4:1	2.25%	3.50%	0.8750%
Greater than 4:1	2.75%	4.00%	1.0000%

The Company elected not to renew its normal course issuer bid (NCIB) in December 2018 and therefore didn't purchase any shares in 2019.

From January 1, 2018 to December 20, 2018, the Company purchased 227,500 common shares under the NCIB. All purchases were made on the open market through the TSX or alternative trading platforms at the market price of such shares. All shares purchased under the NCIB were cancelled.

Funding for Pulse's future capital expenditures will generally depend on the level of future data library sales. Pulse's management believes that the Company's capital resources will be sufficient to finance future operations and carry out the necessary capital expenditures through 2019. The Company anticipates that future capital expenditures will be financed through cash on hand, available credit facilities, and funds from operations. The Company has a \$30.0 million revolving credit facility with \$22.1 million undrawn, and an accordion feature allowing Pulse to increase the facility's size by up to \$25.0 million, subject to the lenders' consent. If deemed appropriate by management and the Board of Directors, Pulse can also issue common or preferred shares.

Pulse requires flexibility in managing its capital structure to take advantage of opportunities in raising additional capital where opportunities for seismic data acquisitions arise. Historically, the Company has used a combination of debt and equity to finance growth initiatives, and it continues to rely on internal measures such as the long-term debt to equity ratio to structure and forecast its capital requirements. Long-term debt is defined as long-term debt net of deferred financing costs. At December 31, 2019, the long-term debt to equity ratio was 0.99:1. Pulse's management considers the current capital structure appropriate.

This discussion on liquidity, capital resources and capital requirements contains forward-looking information; users of this information are cautioned that actual results may vary and are encouraged to review the discussions of risk factors and forward-looking statements below.

## NON-CAPITAL RESOURCES

The Company's main non-capital resource is its key management and staff. The Company has an experienced team with extensive knowledge about the seismic industry. Pulse's management understands industry cycles and how to manage the business in the downturn and recovery phases. Pulse has built strong sales, financial and information technology departments. Key management and staff are eligible to participate in the short-term and long-term incentive plans, which are tied to the Company's shareholder free cash flow per share.

## NON-GAAP FINANCIAL MEASURES AND RECONCILIATIONS

This MD&A and the Company's continuous disclosure documents provide discussion and analysis of cash EBITDA and shareholder free cash flow. IFRS do not include standard definitions for these measures and, therefore, they may not be comparable to similar measures used and disclosed by other companies. As IFRS have been incorporated into Canadian generally accepted accounting principles (GAAP), these non-IFRS measures are also non-GAAP measures. The Company has included these non-GAAP financial measures because management, investors, analysts and others use them to evaluate the Company's financial performance.

Cash EBITDA and shareholder free cash flow are not calculations based on IFRS and should not be considered in isolation or as a substitute for IFRS performance measures, nor should they be used as an exclusive measure of cash flow, because they do not consider working capital changes, capital expenditures, long-term debt repayments and other sources and uses of cash which are disclosed in the consolidated audited and interim statements of cash flows.

### CASH EBITDA AND SHAREHOLDER FREE CASH FLOW

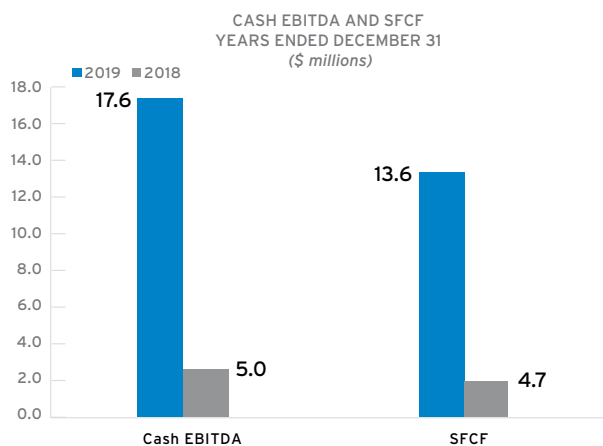

Cash EBITDA represents the capital available to invest in growing the Company's 2D and 3D seismic data library, to pay interest and principal on its long-term debt, to purchase its common shares, to pay taxes and to pay dividends.

Cash EBITDA is calculated as earnings or loss from operations before interest, taxes, depreciation and amortization less participation survey revenue, plus non-cash and non-recurring expenses. Cash EBITDA excludes participation survey revenue as this revenue is directly used to fund specific participation surveys and is unavailable for discretionary expenditures. The Company believes cash EBITDA helps investors compare Pulse's results on a consistent basis without regard to participation survey revenue and non-cash items, such as depreciation and amortization, which can vary significantly depending on accounting methods or non-operating factors such as historical cost.

Shareholder free cash flow further refines the calculation of capital available to invest in growing the Company's 2D and 3D seismic data library, to repay debt, to purchase its common shares and to pay dividends, by deducting non-discretionary expenditures from cash EBITDA. Non-discretionary expenditures are defined as debt financing costs (net of deferred financing expenses amortized in the current period) and current tax provisions.

A reconciliation of net earnings or loss to EBITDA, cash EBITDA and shareholder free cash flow follows:

(thousands of dollars, except per share data)	Three months ended December 31,		Years ended December 31,	
	2019	2018	2019	2018
Net earnings (loss)	(759)	1,024	(3,411)	(1,730)
Add:				
Amortization of seismic data library	3,500	1,811	14,200	7,337
Net financing costs (income)	526	(72)	2,452	(318)
Income tax expense (reduction)	327	355	1,226	(678)
Depreciation	165	18	645	71
EBITDA	3,759	3,136	15,112	4,682
Deduct:				
Lease payments treated as capital lease	21	–	85	–
Warehouse rental revenue	75	–	425	–
Add:				
Non-cash expenses	71	73	292	355
Non-recurring expenses (includes add-back Seitel expenses)	145	–	2,663	–
Cash EBITDA	3,879	3,209	17,557	5,037
Deduct:				
Net financing costs (income)	526	(72)	2,452	(318)
Current income tax expense	440	665	1,775	684
Add:				
Non-cash deferred financing charges	33	–	124	–
Interest paid (capital lease)	35	–	151	–
Shareholder free cash flow (SFCF)	2,981	2,616	13,605	4,671
Cash EBITDA per share basic and diluted	0.07	0.06	0.33	0.09
SFCF per share basic and diluted	0.06	0.05	0.25	0.09

As reported in previous filings concerning the Seitel acquisition, in addition to the purchase price of \$58.6 million, Pulse assumed various future liabilities viewed by the Company as being part of the total cost of the acquisition. These estimated \$4.2 million of costs are being expensed over time and categorized as restructuring costs, with a large percentage occurring in the first year, including \$2.7 million in 2019. Because these expenses are expected to be non-recurring, they are being excluded from the Company's calculation of cash EBITDA and shareholder free cash flow. Also deducted from the cash EBITDA calculation is the rental revenue received for the use of a portion of the warehouse by a third party.

## FINANCIAL INSTRUMENTS

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity. Financial instruments are recognized on the statement of financial position when the Company becomes a party to the instrument's contractual obligations. The Company's financial assets include cash and cash equivalents, trade and other receivables. Its financial liabilities mainly comprise accounts payable and long-term debt.

### FAIR VALUE

The fair values of cash and cash equivalents, accounts receivable and accounts payable approximate their carrying amount largely due to the short-term maturities of these instruments. The fair value of the long-term debt approximates the carrying value because interest charges under the bank loan are based on current Canadian bankers' acceptance rates and margins.

### CREDIT RISK

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations, and arises principally from the Company's accounts receivable.

The Company is exposed to customer credit risk in connection with data sales and participation surveys with its customers. The Company's exposure to credit risk is influenced mainly by the individual characteristics of each customer. The nature of the Company's customer base, including the default risk of the industry in which customers operate, has an influence on credit risk. As the Company operates to a large extent in the oil and natural gas industry, nearly all of its trade receivables relate to customers from this industry.

The effective monitoring and control of credit risk is a core competency of the Company. Each new customer is analyzed individually for creditworthiness before payment and delivery terms and conditions are offered. The Company's review includes credit reference checks and credit limits for all customers as well as other monitoring activities. Accounts receivable aging is reviewed regularly.

Certain customers have signed agreements with the Company that provide for extended payment terms. The Company's credit risk increases on these types of arrangements due to the length of time before payments are received. The risk is mitigated by attempting to limit these types of arrangements to major oil and natural gas companies which have long operating histories and adequate resources to fulfill their commitments.

The Company has been doing business with the majority of its customers for many years, with insignificant credit losses to date. The Company does not require collateral in respect of trade receivables.

The Company's customers are in the oil and natural gas industry, with the majority located in Alberta. At December 31, 2019, 88 percent or \$7.7 million of total accounts receivable were due from two customers. Of this amount, \$2.4 million was collected subsequent to year-end. The Company does not expect any problem in collecting the remaining amounts.

In 2019, the Company recorded a bad debt expense of \$180,000 (2018 - \$nil). At December 31, 2019, 4 percent or \$387,000 of total accounts receivable (two customers) were more than 90 days past due. While one customer assures the Company that payment will be made in due course, the timing of collection is extremely uncertain and the amount was overdue for nine months at December 31, 2019.

The Company has not recorded a bad debt expense since 2012. Accounts receivable over 90 days are monitored and assessed for impairment. Those accounts are evaluated on a case by case basis using information received from the customer and market information. The Company has one other account due for more than 90 days but believes that this account is collectible.

Cash and cash equivalents are held with a Canadian chartered bank that is one of Canada's five largest banks. The carrying amount of financial assets represents the maximum credit exposure. The Company considers the risk on cash and cash equivalents to be limited.

### LIQUIDITY RISK

Liquidity risk is the risk that the Company will encounter difficulty in meeting the obligations associated with its financial liabilities that are settled in cash or other financial assets, i.e., repaying its debt and paying its suppliers. The Company's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under normal and stressed conditions, without incurring unacceptable losses or risking damage to its reputation. Beyond cash on hand of \$1.4 million and total working capital of \$596,000, the Company had a revolving-term credit facility, which offers flexibility in drawing and paying down debt, without penalty, of which \$22.1 million remained available at December 31, 2019 for future draws, as described in "Liquidity, Capital Resources and Capital Requirements".

The Company regularly monitors cash flow. In addition, it monitors funding options available in the capital markets, as well as trends in the availability and costs of such funding, with a view to maintaining financial flexibility and limiting repayment risks. The Company does not believe that it will encounter difficulty in meeting its obligations associated with financial liabilities.

### COMMODITY PRICE RISK

The Company is not directly exposed to commodity price risk as it does not have any contracts directly based on commodity prices. A change in commodity prices, specifically oil and natural gas prices, could have a material impact on the Company's customers' cash flows and could therefore affect seismic data library sales and participation surveys. Commodity prices are affected by many factors, including supply and demand. The Company has not entered into any commodity price risk contracts. Given that this is an indirect influence, the financial impact on the Company of changing oil and natural gas prices is not reasonably determinable.

## NEW IFRS STANDARDS

A number of new standards, amendments to standards and interpretations have been issued by the International Accounting Standards Board (IASB) but are not yet effective for the year ending December 31, 2019. Accordingly, they were not applied in preparing the condensed consolidated interim financial statements. None is expected to have a significant effect on the consolidated financial statements.

Effective January 1, 2019 the Company adopted IFRS 16, *Leases*. The most significant effect of the new standard will be the lessee's recognition of the initial present value of unavoidable future lease payments as ROU lease assets and lease liabilities on the statement of financial position, including those for most leases that were accounted for as operating leases.

Actual cash flows will be unaffected in applying the new standard. The results are that the lessee's statement of cash flows will reflect increases in cash flows from operating activities (depreciation expense) offset by decreases in cash flows from financing activities (capital lease cash payment for principal). This is the result of the presentation of the payments of the "principal" component of the lease liability that were accounted for as operating leases as a cash flow used in financing activities under the new standard.

Pulse elected to apply the modified retrospective approach and adjusted its retained earnings. An adjustment of \$110,000 was made on January 1, 2019. Pulse used an incremental borrowing rate of 6.7 percent to calculate the initial present value of the ROU and lease liability.

## CRITICAL ACCOUNTING ESTIMATES

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions. Management's estimates and assumptions affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, as well as the reported amounts

of revenues and expenses during the reporting period. Actual results could differ from those estimates. The Company's critical accounting estimates are discussed annually with the Audit and Risk Committee of the Company's Board of Directors and are described below.

### **SEISMIC DATA LIBRARY**

Amortization of the seismic data library, the Company's largest asset, with a net book value of \$57.9 million at December 31, 2019 (December 31, 2018 – \$11.0 million), is conducted by reference to the estimated timing of the economic return of the seismic library. Amortization of the seismic data library is based on management's estimates of expected future sales, expected useful lives, market developments and experience. These estimates may change due to changes in market conditions, potential prospects, exploration licence periods, exploration and development in certain areas, government regulations and general economic conditions. Because of the inherent difficulty in estimating market developments and future sales, the amortization rates might not accurately reflect the systematic allocation of the seismic data library over its useful life.

Additions to the seismic library arise in two ways: (i) participation surveys, and (ii) the purchase of existing seismic data. Costs directly incurred in acquiring, processing and otherwise completing seismic surveys are capitalized to the seismic data library. Subsequent expenditures on data library assets, such as reprocessing and digitization, are capitalized only when the expenditure increases the asset's future economic benefits. All other expenditures are recognized in earnings as incurred.

The costs of purchased data are amortized on a straight-line basis over seven years.

The carrying amounts of the seismic data library are reviewed at each reporting date by management to determine whether there is any indication of impairment. If so, the asset's recoverable amount is estimated and impairment recorded, if any. The determination of the Company's cash-generating units was based on management's judgements in regards to the smallest identifiable group of seismic data that generates cash inflows largely independent of the cash inflows from other data. Estimating future cash flows and residual values for purposes of impairment testing requires management to make judgments regarding long-term forecasts of future revenues and costs and future residual values related to the seismic data library. These forecasts are uncertain as they require assumptions about future market conditions and demand for seismic data. Significant and unanticipated changes in these assumptions could require a provision for impairment in a future period.

As discussed above, the Company did not recognize an impairment loss in 2019 or 2018.

Estimates of useful lives and the pattern of expected future economic benefits are based on historical experience and internal business plans. Expected future economic benefits are determined based on historical revenue patterns. Future deviations from the Company's historical returns could materially affect the current amortization methodology.

### **PERFORMANCE SHARE UNITS**

In determining the amount of share-based compensation related to PSUs, management makes estimates about future results and vesting criteria. It is reasonably possible that future outcomes could be different from the estimates and could require a material adjustment to the share-based compensation expense recorded in future periods. The impact of any change in the number of PSUs expected to vest is recognized in the period the estimate is revised.

### **DEFERRED TAX ASSETS**

Significant management judgement is required to determine the amount of deferred tax assets that can be recognized, based on the likely timing and level of future taxable income. The estimates of projected future taxable income are based on a variety of factors and assumptions, many of which are subjective and beyond the Company's control. Accordingly, these estimates could differ significantly from year to year, and the Company might end up realizing more or less of the deferred tax assets than recognized in the consolidated financial statements.

## DISCLOSURE CONTROLS AND PROCEDURES (DC&P) AND INTERNAL CONTROLS OVER FINANCIAL REPORTING (ICFR)

### DC&P

Management has evaluated the effectiveness of its DC&P (as defined in National Instrument 52-109), under the supervision of its CEO and CFO, at December 31, 2019. Based on this evaluation, the CEO and CFO have concluded that the DC&P were effective at December 31, 2019.

### ICFR

Management under the supervision of its CEO and CFO evaluated the effectiveness of ICFR (as defined in National Instrument 52-109) at December 31, 2019, in accordance with Internal Control 2013 Integrated Framework, issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) and the Control Objectives for Information and Related Technology Framework (COBIT). Based on this evaluation, Pulse's CEO and CFO concluded that the ICFR were effective at December 31, 2019.

No changes were made to ICFR during the period beginning on October 1, 2019 and ending on December 31, 2019 that have materially affected, or are reasonably likely to materially affect, Pulse's ICFR.

## RISK FACTORS

### OIL AND NATURAL GAS PRICES

Pulse's customers are oil and natural gas exploration and development companies. Oil and natural gas prices are volatile and directly affect the capital budgets, drilling activity, and access to capital and credit by Pulse's customers, which in turn directly affect the demand by such customers for seismic data.

### DATA ACQUISITION, DEMAND FOR SEISMIC DATA AND PARTICIPATION SURVEYS

Pulse's ability to generate revenue, cash EBITDA, shareholder free cash flow and earnings and to grow its seismic data library depends on the acquisition of new data and participation surveys and the demand for seismic data from its oil and natural gas customers over geological plays and areas that such customers focus on in a given period. Activity in such plays and areas depends on commodity prices, customers' budgets, geological understanding, advances in drilling technology, government fiscal and regulatory regimes, and access to processing and pipeline capacity, all of which are beyond Pulse's control. The Company endeavours to grow its high-quality proprietary data library, to expand and maintain its customer base, and to provide good customer service with short delivery time and broad data coverage in prospective locations.

### PRICING OF DATA LIBRARY LICENCE SALES

Pulse's ability to generate revenue, cash EBITDA, shareholder free cash flow and earnings and to grow its data library depends on its ability to market data library licences and on the pricing of these licences. Pulse prices its data competitively while endeavouring to maintain the integrity of the database.

### CYBERSECURITY

Pulse maintains strong cybersecurity over its IT systems, networks and website with the goal of preventing cyber-attacks. Cyber-attacks are intentional attempts to gain unauthorized access to information systems, networks and websites for unlawful or improper purposes. Attempts to breach cybersecurity are becoming more sophisticated and could lead to unauthorized access and release of confidential information and disruption in operating systems.

Cyber attackers may use a range of techniques, from manipulating people to using sophisticated malicious software and hardware on a single or distributed basis. Some cyber-attacks use a combination of techniques in their attempts to evade safeguards. Pulse uses firewalls, intrusion prevention systems and antivirus software in the security program of its systems and networks. The risk and consequences of cyber-attacks can surpass traditional physical security risk due to the rapidly evolving scope and sophistication of these threats.

A successful attack on Pulse's systems, networks, website or infrastructure could prevent Pulse from providing reliable service and information, allow for the unauthorized interception, destruction, use or dissemination of Pulse's or its customers' information, and/or prevent Pulse from operating its networks. Such events could cause the Company to lose customers, lose revenue, incur expenses, and suffer reputational and goodwill damages. It could also lead to a loss or devaluation of Pulse's intellectual property rights and could subject the Company to litigation or government investigation. The costs of such events could include liability for information loss, and repairs to infrastructure and systems. Pulse's insurance may not cover or be adequate to fully reimburse the Company for these costs and losses.

To mitigate these risks, Pulse has implemented measures and processes that mitigate the risk of physical and cyber-attacks. Pulse has policies, controls and monitoring systems that protect its assets and employees. Pulse also uses cyber threat intelligence, testing, intrusion prevention/detection and incident response capabilities to help identify possible cyber threats and adjust its security measures accordingly.

Pulse also has a recovery plan in case of a cyber-attack. It includes backup infrastructure and systems that mirror the primary infrastructure and systems used in the day-to-day operations. The recovery plan has been tested.

Pulse also uses a third party to store its physical seismic data, the Company's revenue-generating asset, and a backup copy of the digital seismic data library. The third party backs-up the data using the same technology as Pulse, which includes redundant offsite storage in a secured data facility as well as tape backups.

As part of the risk management strategy, the Company's IT Director reports in person on a regular basis to the Audit and Risk Committee of the Board of Directors the key risk indicators including any new risks that Pulse is facing in its day-to-day operations along with updates to the risk mitigation plans. The Audit and Risk Committee has the oversight responsibility for cyber security. The goal of the strategy is to be prepared, protected, and able to quickly detect and respond appropriately to the situation. The strategy to ensure post-breach reporting requirements are met in case of security breach.

Pulse has not experienced a security incident or breach. If a material security breach happens in the future, the Pulse Disclosure Committee would enforce the communication plan to inform the relevant stakeholders including employees, directors, customers, securities commissions, stock exchanges, government agencies and shareholders as soon as possible.

#### **RELICENSING (CHANGE-OF-CONTROL) FEES AND PARTNER COPY SALES**

Data library licences are generally not transferable. Under Pulse's current standard-form licence agreement, upon a change of control of the licensee in a merger or acquisition transaction, a change-of-control fee is generally payable. Under Pulse's current standard-form licence agreement, a licensee generally may not give the licensed data to a joint interest partner in the oil and natural gas lands. If the joint interest partner wishes to view or interpret the seismic data, it must purchase an additional copy directly from Pulse.

The precise terms of individual licence agreements (including those historically used by Pulse and its predecessors and those assumed by Pulse on data acquisitions) can vary greatly. Relicensing (change-of-control) fees may not always be payable and joint interest partners may not always wish or have to purchase an additional licensed copy.

In addition, merger-and-acquisition and joint venture activity in the oil and gas industry is unpredictable.

#### **PRE-FUNDING OF PARTICIPATION SURVEYS AND SUBSEQUENT DATA LIBRARY LICENCE SALES**

Pulse's rate of pre-funding for participation surveys varies, with the actual target percentage funding of each particular survey determined by Pulse ahead of time depending on Pulse's risk analysis of such survey and competitive conditions in the area. Factors affecting these individual survey program targets include: circumstances in which Pulse believes there is a high probability of additional participants joining the survey before completion or additional licence sales after completion of the survey, or where a survey is located in a strategic location, or where competitive conditions require a lower level of pre-funding.

Pulse's ability to generate revenue, cash EBITDA, shareholder free cash flow and earnings and to grow the data library depends on its ability to obtain targeted levels of pre-funding for participation surveys, and to make subsequent seismic data library sales from such surveys.

## COMPLETION OF PARTICIPATION SURVEYS

Pulse obtains presales of licences for participation surveys based on its budgeted costs and program schedule. Pulse's ability to generate revenues, cash EBITDA, shareholder free cash flow and earnings depends on its ability to complete committed participation surveys on time and within budget. Cost overruns are generally absorbed by Pulse and effectively reduce the percentage of pre-funding. The Company endeavours to manage this risk through the use of a dedicated survey project team with extensive experience.

## ENVIRONMENTAL, HEALTH AND SAFETY RISKS

Pulse's field operations for participation surveys are subject to laws and regulations relating to environmental protection and occupational health and safety. A breach of these laws and regulations could result in material fines and civil lawsuits, as well as reputational damage. Pulse endeavours to reduce this risk by employing seasoned specialists who provide comprehensive training, field supervision and monitoring, and by working with a network of trusted sub-contractors who operate to high standards. In March 2018, Pulse received the renewal of its three-year Certificate of Recognition (COR) issued by Enform and the Government of Alberta, with a score of 96 percent. The COR program recognizes employers in the Alberta oil and natural gas industry having a health and safety management system that meets provincial standards.

## LAWS AND REGULATIONS

Pulse's oil and natural gas customers are subject to federal and provincial laws and regulations, including those pertaining to taxation, royalty rates, environmental protection and safety. Compliance with these laws and regulations, and changes in these laws and regulations, may affect oil and natural gas exploration and development activities and the demand for seismic data licences and participation surveys by such customers.

Pulse's field operations for participation surveys are subject to federal and provincial laws and regulations, including laws and regulations relating to safety and environmental protection. Pulse and its contractors are required to invest financial and managerial resources to comply with such laws and related permit requirements in their operations. Although such expenditures historically have not been material to Pulse, such laws and regulations are subject to change and, accordingly, it is impossible for the Company to predict the cost or impact of such laws and regulations on its future operations.

## COMPETITION

The western Canadian geophysical services industry in which Pulse operates is competitive and price-sensitive. Pulse competes with companies which may have greater financial resources, and certain of which are large international geophysical services companies that offer a wider array of geophysical services to their clients than Pulse. Pulse also competes with other companies that acquire, market and license seismic data, that maintain their own seismic data libraries, and that compete against Pulse in shooting participation surveys and licensing seismic data to their customers. Pulse also competes against oil and natural gas companies that may choose to license their own proprietary seismic data to customers. To mitigate this risk, Pulse's management continuously evaluates its marketing plan and marketing efforts. In addition, the Company owns high-quality data with extensive coverage in the WCSB. Other geophysical companies that own large data libraries are considered to be indirect competitors of Pulse, as there is generally little overlap between 3D databases. With each company owning unique seismic data, clients seeking specific data will usually choose to license available data from the appropriate library as the cost of overshooting an already-surveyed area is much higher than licensing existing data. Seismic data library companies and individual oil and gas companies may, however, elect to overshoot an existing 3D dataset if it is not of the desired quality or specifications.

## DEPENDENCE ON QUALIFIED SEISMIC CONTRACTORS

Pulse depends on qualified seismic acquisition contractors to complete its seismic surveys on time and within budget. Pulse endeavors to enter into master service agreements and to establish relationships with its key contractors. The recent downturn in the business has led to a consolidation of seismic acquisition contractors.

## KEY MANAGEMENT, OPERATIONS AND MARKETING PERSONNEL

Pulse depends on certain key management, operations and marketing personnel for the success of its seismic acquisition, marketing and licensing business. Pulse endeavors to obtain written employment agreements with such personnel containing confidentiality and non-competition provisions where appropriate. Personnel risk is further mitigated by providing compensation packages designed to support Pulse's business philosophy and which are both market-driven and performance-based. This includes short- and long-term incentive programs which are directly tied to shareholder free cash flow per share, which the Board of Directors believes is the key financial metric for the long-term increase in the value of Pulse. Pulse also has a succession plan to provide adequate training and education to its future leaders, which is reviewed annually by the Board of Directors.

## LOSS OF SEISMIC DATA

Pulse's largest asset and source of revenue is the seismic data library. The safety and security of the data library asset is imperative to the Company's success. The physical data is stored in two secure locations and managed by Pulse staff and a data storage company. The majority of the physical data has been digitized, with the exception of a portion of the 2D data acquired in 2019, and back-up digital copies are kept in separate secure locations. For further information, please also see "Cybersecurity" above.

## PROTECTION OF INTELLECTUAL PROPERTY

Pulse relies on a combination of licence agreements, copyright, confidentiality and other intellectual property rights to protect its ownership rights and copyright in its seismic data. Despite Pulse's efforts to enforce its licence agreements and copyright, there is a risk that unauthorized parties might improperly obtain, copy or use Pulse's seismic data without Pulse's knowledge or permission. The cost of litigation necessary to enforce Pulse's ownership rights and copyright could be prohibitive.

## NEW PRODUCTS

Seismic data is used by oil and natural gas exploration and development companies to identify portions of geological formations that have the potential to hold hydrocarbons. There are currently no other products that compete directly against seismic data for such purposes. Should a new product or method be introduced that was technically and/or economically comparable or superior to seismic data, Pulse's data library sales and/or the pricing thereof could be adversely affected.

## CLIMATE CHANGE

The Company's seismic data library is a digital asset that is generally unaffected by climate change. Climate change, however, affects Pulse's customers, the oil and natural gas exploration and production companies who license seismic data for drilling and exploration. New carbon and environmental laws and regulations, including those related to climate change and carbon regulations, as well as the physical effects of climate change, including extreme weather events, resource shortages and changing sea levels and temperatures, may adversely affect these companies, their businesses, operations and financial condition over time and will change their exploration, development and production programs, their capital expenditures and their need for seismic data, which could result in an unmeasurable adverse impact on Pulse sales, cash flow and profitability.

Climate change could also affect the way the Company conducts participation surveys. Climate change could reduce or extend the window that the Company has to collect data in the field without major impact on the environment. The ground has to be dry or thoroughly frozen for Pulse to conduct participation surveys. Extreme weather conditions could limit access to survey areas and increase health and safety risks.

The Company recognizes climate change as an increasingly important global challenge and is committed to promoting responsible energy use in its own business and operations. The Board and management of the Company routinely monitor proposed changes in carbon and environmental policy, legislation and regulation and will continue to assess the risks of climate change on the business and operations of the Company.

## ADDITIONAL INFORMATION

You may find additional information relating to Pulse, including the Company's Annual Information Form, on SEDAR at [www.sedar.com](http://www.sedar.com).

## FORWARD-LOOKING INFORMATION

This document contains information that constitutes "forward-looking information" or "forward-looking statements" (collectively, "forward-looking information") within the meaning of applicable securities legislation. Forward-looking information is often, but not always, identified by the use of words such as "anticipate", "believe", "expect", "plan", "intend", "forecast", "target", "project", "guidance", "may", "will", "should", "could", "estimate", "predict" or similar words suggesting future outcomes or language suggesting an outlook.

This MD&A and, specifically, the Outlook and the Liquidity, Capital Resources and Capital Requirements sections herein contain forward-looking information which includes, but is not limited to, statements regarding:

- The outlook of the Company the year ahead, including future operating costs and expected revenues;
- Recent events on the political, economic, regulatory and legal fronts affecting the industry's medium- to longer-term prospects, including progression and completion of contemplated pipeline projects;
- The Company's capital resources and sufficiency thereof to finance future operations, meet its obligations associated with financial liabilities and carry out the necessary capital expenditures through 2020;
- Pulse's capital allocation strategy;
- Pulse's dividend policy;
- Oil and natural gas prices and forecasted trends;
- Oil and natural gas drilling activity and land sales activity;
- Oil and natural gas company capital budgets;
- Future demand for seismic data;
- Future seismic data sales;
- Future demand for participation surveys;
- Pulse's business and growth strategy; and
- Other expectations, beliefs, plans, goals, objectives, assumptions, information and statements about possible future events, conditions, results and performance, as they relate to the Company or to the oil and gas industry as a whole.

Sources for the forecasts and the material assumptions underlying this forward-looking information are, where applicable, noted in the relevant sections of this MD&A.

By its very nature, forward-looking information involves inherent risks and uncertainties, both general and specific, and risks that predictions, forecasts, projections and other forward-looking statements will not be achieved. Pulse does not publish specific financial goals or otherwise provide guidance, due to the inherently poor visibility of seismic revenue. We caution readers not to place undue reliance on these statements as a number of important factors could cause the actual results to differ materially from the beliefs, plans, objectives, expectations and anticipations, estimates and intentions expressed in such forward-looking information. These factors include, but are not limited to:

- Uncertainty of the timing and volume of data sales from the newly acquired seismic data library, which was partially funded with long-term debt;
- Volatility of oil and natural gas prices;
- Risks associated with the oil and gas industry in general;

- The Company's ability to access external sources of debt and equity capital;
- Credit, liquidity and commodity price risks;
- The demand for seismic data and participation surveys;
- The pricing of data library licence sales;
- Cybersecurity;
- Relicensing (change-of-control) fees and partner copy sales;
- The level of pre-funding of participation surveys, and the Company's ability to make subsequent data library sales from such participation surveys;
- The Company's ability to complete participation surveys on time and within budget;
- Environmental, health and safety risks;
- Federal and provincial government laws and regulations, including those pertaining to taxation, royalty rates, environmental protection and safety;
- Competition;
- Dependence on qualified seismic field contractors;
- Dependence on key management, operations and marketing personnel;
- The loss of seismic data;
- Protection of intellectual property rights;
- The introduction of new products; and
- Climate change.

Pulse cautions that the foregoing list of factors that may affect future results is not exhaustive. Additional information on these risks and other factors which could affect the Company's operations and financial results is included under "Risk Factors" herein, under "Risk Factors" in the Company's most recent annual information form, and in the Company's most recent audited annual financial statements, management information circular, quarterly reports, material change reports and news releases. Copies of the Company's public filings are available on SEDAR at [www.sedar.com](http://www.sedar.com).

When relying on forward-looking information to make decisions with respect to Pulse, investors and others should carefully consider the foregoing factors and other uncertainties and potential events. Furthermore, the forward-looking information contained in this MD&A is provided as of the date of this MD&A and the Company does not undertake any obligation to update publicly or to revise any of the included forward-looking information, except as required by law. The forward-looking information in this document is provided for the limited purpose of enabling current and potential investors to evaluate an investment in Pulse. Readers are cautioned that such forward-looking information may not be appropriate, and should not be used, for other purposes.

# INDEPENDENT AUDITORS' REPORT

## TO THE SHAREHOLDERS OF PULSE SEISMIC INC.

We have audited the consolidated financial statements of Pulse Seismic Inc. (the Entity), which comprise:

- the consolidated statements of financial position as at December 31, 2019 and December 31, 2018
- the consolidated statements of comprehensive loss for the years then ended
- the consolidated statements of changes in equity for the years then ended
- the consolidated statements of cash flows for the years then ended
- and notes to the consolidated financial statements, including a summary of significant accounting policies

(Hereinafter referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the consolidated financial position of the Entity as at December 31, 2019 and December 31, 2018, and its consolidated financial performance and its consolidated cash flows for the years then ended in accordance with International Financial Reporting Standards (IFRS).

### BASIS FOR OPINION

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the "Auditors' Responsibilities for the Audit of the Financial Statements" section of our auditors' report.

We are independent of the Entity in accordance with the ethical requirements that are relevant to our audit of the financial statements and we have fulfilled our other responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

### EMPHASIS OF MATTER – PROSPECTIVE CHANGE IN ACCOUNTING POLICY

We draw attention to Note 3n to the financial statements which indicates the the Entity has changed its accounting policy for Leases and has applied the change prospectively.

Our opinion is not modified in respect of this matter.

### OTHER INFORMATION

Management is responsible for the other information. Other information comprises:

- the information included in Management's Discussion and Analysis filed with the relevant Canadian Securities Commissions.

Our opinion on the financial statements does not cover the other information and we do not and will not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit and remain alert for indications that the other information appears to be materially misstated.

We obtained the information included in Management's Discussion and Analysis filed with the relevant Canadian Securities Commissions as at the date of this auditors' report. If, based on the work we have performed on this other information, we conclude that there is a material misstatement of this other information, we are required to report that fact in the auditors' report.

We have nothing to report in this regard.

## RESPONSIBILITIES OF MANAGEMENT AND THOSE CHARGED WITH GOVERNANCE FOR THE FINANCIAL STATEMENTS

Management is responsible for the preparation and fair presentation of the financial statements in accordance with International Financial Reporting Standards (IFRS), and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Entity's ability to continue as a going concern, disclosing as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Entity or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Entity's financial reporting process.

## AUDITORS' RESPONSIBILITIES FOR THE AUDIT OF THE FINANCIAL STATEMENTS

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements.

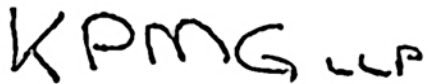

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit.

We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion.  
The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Entity's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Entity's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditors' report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditors' report. However, future events or conditions may cause the Entity to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.
- Provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.
- Determine, from the matters communicated with those charged with governance, those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditors' report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our auditors' report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

The engagement partner on the audit resulting in this auditors' report is Sophia J. Langlois.

The image shows a handwritten signature in black ink that reads "KPMG LLP". The letters are bold and slightly slanted, with a casual, professional appearance.

# NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

INFORMATION AS AT DECEMBER 31, 2019 AND 2018 AND FOR THE YEARS ENDED DECEMBER 31, 2019 AND 2018.

(Tabular amounts in thousands of Canadian dollars, except per share data, numbers of shares and other exceptions as indicated)

## 1. REPORTING ENTITY

Pulse Seismic Inc. (the Company) was incorporated under the Canada Business Corporations Act and is a publicly-listed company on the Toronto Stock Exchange (TSX) trading under the symbol PSD and on the OTCQX International trading under the symbol PLSDF. The Company's registered office is in Calgary, Alberta. The Company is a provider of seismic data to the energy sector in western Canada.

## 2. BASIS OF PREPARATION

### (A) STATEMENT OF COMPLIANCE

The consolidated financial statements were prepared in accordance with International Financial Reporting Standards (IFRS).

The consolidated financial statements were prepared by the Company's management and were approved by the Board of Directors on February 12, 2020.

### (B) BASIS OF PRESENTATION

The consolidated financial statements include the accounts of the Company's wholly-owned subsidiaries. Certain comparative figures have been reclassified to conform to the current year's presentation.

### (C) BASIS OF MEASUREMENT

The consolidated financial statements were prepared on the historical cost basis.

### (D) FUNCTIONAL AND PRESENTATION CURRENCY

The consolidated financial statements are presented in Canadian dollars, the Company's functional currency. All financial information presented in Canadian dollars has been rounded to the nearest thousand, except per share data, number of shares and other exceptions as indicated.

### (E) BASIS OF CONSOLIDATION

#### (I) JOINT OPERATIONS

Certain of the Company's seismic data library assets are jointly owned with others. The consolidated financial statements include the Company's share in the joint assets, joint liabilities, expenses incurred and income earned from the joint operations.

#### (II) TRANSACTIONS ELIMINATED ON CONSOLIDATION

Intra-group balances and transactions, and any unrealized income and expenses arising from intra-group transactions, are eliminated in preparing the consolidated financial statements.

### (F) USE OF ESTIMATES AND JUDGEMENTS

Preparing the consolidated financial statements in accordance with IFRS required management to make estimates and judgements that affected the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the consolidated financial statements, and the revenue and expenses attributed to the reporting period. Actual results could differ from those estimates.

Estimates and underlying assumptions are reviewed at a minimum annually, as required by IFRS. Changes to accounting estimates are recognized in the year in which the estimates are revised and in any future years affected.

The following note provides information about critical judgements in applying accounting policies that have the most significant effect on the amounts recognized in the consolidated financial statements:

- Note 3(h) - The Company uses judgement in determining its cash-generating units (CGUs) for purposes of impairment testing. The determination was based on management's judgement in regards to the smallest identifiable group of seismic data that generates cash flows largely independent of the cash inflows from other data. Changes in the determination of CGUs could have a significant impact on the carrying value of the assets and result in additional impairment charges or reversal of impairment charges in future periods.

The following notes provide information about assumptions and estimation uncertainties that pose a significant risk of a material adjustment within the next financial year:

- Note 3(f) - Amortization of seismic data library is based on management's estimates of expected future sales, expected useful lives, market developments and experience. These estimates may change due to changes in market conditions, potential prospects, exploration licence duration, exploration and development in certain areas, government regulations and general economic conditions. Because of the inherent difficulty in estimating market developments and future sales, the amortization rates might not accurately reflect the useful life of the data library. The amortization rates are adjusted if it is determined that estimated useful lives have changed.
- Note 3(h) - Impairment tests, if required, involve the estimation of future cash flows, requiring management to make judgments regarding long-term forecasts of future revenues and costs related to the seismic data library and residual values. These forecasts are subject to uncertainty as they require assumptions about demand for seismic data and future market conditions. Significant changes in these assumptions could require a provision for impairment in a future period.
- Note 3(i) - Deferred tax assets are recognized for all unused tax losses to the extent that it is probable that taxable profit will be available against which the losses can be utilized. Significant management judgment is required to determine the amount of deferred tax assets that can be recognized, based on the likely timing and level of future taxable profits. The estimates of projected future taxable profits are based on a variety of factors and assumptions, many of which are subjective and outside the Company's control. Accordingly, these estimates could differ significantly from year to year, and the Company might end up realizing more or less of the deferred tax assets than it has recognized in the consolidated financial statements.
- Note 3(l) - The number of Performance Share Units (PSUs) expected to vest is based on management's estimates of expected future results and vesting criteria in subsequent years. These forecasts are uncertain as they require assumptions about future market conditions, revenues, expenses and vesting criteria. Significant changes in the assumptions could require an adjustment to the amount of share-based compensation recognized.

### 3. SIGNIFICANT ACCOUNTING POLICIES

The accounting policies set out below have been applied consistently to all periods presented in these consolidated financial statements.

#### (A) REVENUE RECOGNITION

##### (I) DATA LIBRARY SALES

Revenue from data library sales is recognized when a customer obtains control of seismic data through receipt and acceptance of the data. Invoices are generated and revenue is recognized at that point. Invoices are usually payable within 30 days.

Some customers request extended payments terms. When payment terms granted by the Company are for more than one year, the Company discounts its account receivable and the related data library sales revenue is recognized over the collection period as interest income.

## (II) PARTICIPATION SURVEYS

The Company participates with customers in 3D seismic participation surveys from which the Company retains proprietary rights to the collected data and from which participating customers receive a non-transferable licensed copy.

Participation survey revenue can be recognized when the contract's deliverables are transferred and when a licensed copy of the seismic data is delivered to and accepted by the customer or customers in the case of multiple participants.

There was no participation survey revenue in 2019 or 2018.

### (B) BUSINESS COMBINATIONS/ASSET ACQUISITIONS

Where appropriate, the Company applies the acquisition method to account for business combinations. The Company measures goodwill as the fair value of the consideration transferred, less the fair value of the identifiable assets acquired and liabilities assumed, all measured at the acquisition date.

Amendments to IFRS 3 were introduced and adopted by the Company on December 1, 2018. The amendments clarify the definition of a business with the objective of assisting entities in determining whether a transaction should be accounted for as a business combination or as an asset acquisition. The amendments included the addition of an optional concentration test that permits a simplified assessment of whether an acquired set of activities and assets is a business.

The concentration test is met if substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or group of similar identifiable assets. If the test is met, the Company can elect not to account for the acquisition as a business and instead account for it as an asset acquisition.

### (C) FINANCIAL INSTRUMENTS

Financial assets of the Company include cash and cash equivalents and trade receivables. Financial liabilities of the Company are mainly comprised of trade payables and long-term debt.

Classification and measurement of financial assets and financial liabilities are included in the table below:

Financial Asset (Liability)	Category	Measurement
Cash and Cash equivalents	Assets at amortized cost	Amortized cost
Accounts receivable	Assets at amortized cost	Amortized cost
Accounts payable and accrued liabilities	Financial liabilities at amortized cost	Amortized cost
Other long-term payable	Financial liabilities at amortized cost	Amortized cost
Long-term debt	Financial liabilities at amortized cost	Amortized cost

The Company does not have financial assets or liabilities designated as part of a hedging relationship or qualify for hedge accounting.

### (D) CASH AND CASH EQUIVALENTS

Short-term investments with an original maturity of three months or less, net of the operating line of credit, are considered to be cash equivalents.

### (E) PARTICIPATION SURVEYS IN PROGRESS

Participation surveys in progress include all expenditures related directly to specific projects and an allocation of variable overheads.

If payments are received from customers before data delivery, the amounts received are presented as deferred revenue on the consolidated statement of financial position.

Preliminary costs during the research phase of participation surveys are recognized in earnings as incurred. Development expenditures related to participation surveys are capitalized only once the survey project is deemed technically feasible, which usually occurs when the participation survey contract is signed. The expenditures capitalized include the cost of materials, subcontractor fees and labour costs that are directly attributable to the survey.

#### (F) SEISMIC DATA LIBRARY

The seismic data library is measured at cost less accumulated amortization and impairment losses. Additions to the seismic data library arise in two distinct ways: (i) participation surveys and (ii) the purchase of existing data. Costs directly incurred in acquiring, processing and otherwise completing seismic surveys are capitalized to the seismic data library.

Subsequent expenditures on data library assets, such as reprocessing and digitization, are capitalized only when the expenditure increases the asset's future economic benefits. All other expenditures are recognized in earnings as incurred.

The costs of purchased data are amortized on a straight-line basis over seven years.

Amortization is based on management's estimates of expected future sales, expected useful lives, market developments and experience. These estimates may change due to changes in market conditions, potential prospects, exploration licence duration, exploration and development in certain areas, government regulations and general economic conditions. Amortization methods, useful lives and residual values are reviewed at each financial year-end and adjusted if appropriate.

#### (G) PROPERTY AND EQUIPMENT

Property and equipment are recorded at cost less accumulated depreciation and impairment losses. Cost includes expenditures that are directly attributable to the acquisition of the asset.

Depreciation is calculated over the depreciable amount, which is the cost of an asset less its residual value. Depreciation is recognized in earnings over the estimated useful life of each significant component of an item of property and equipment.

Depreciation is provided using the following methods:

	Straight Line
Computer hardware and software	3 years
Office equipment	5 years
Leasehold improvements	Balance of lease

#### (H) IMPAIRMENT OF LONG-LIVED ASSETS

The carrying amounts of the seismic data library, property and equipment, and intangible assets are reviewed at each reporting date by management to determine whether there is any indication of impairment. If so, the asset's recoverable amount is estimated and impairment recorded, if any.

Factors considered important by the Company that could trigger an impairment assessment include:

- Significant underperformance relative to expected operating results based on historical and/or projected data;
- Significant changes in the manner of the use of the asset or the strategy of the overall business; and
- Significant negative industry or economic trends.

The recoverable amount of tangible and intangible assets is the greater of value in use and fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessment of the time value of money and the risks specific to the asset. For the purpose of impairment testing, assets are classified in the smallest grouping that generates cash inflows from continuing use that are largely independent of the cash inflows of other assets or groups (the CGU).

An impairment loss is recognized if the carrying amount of an asset or its CGU exceeds its estimated recoverable amount. Impairment losses are recognized in earnings or loss. Impairment losses recognized in respect of a CGU are allocated to the carrying amount of the assets in the unit on a pro-rata basis.

Impairment losses for assets recognized in prior periods are assessed at each reporting date for any indications that the loss has decreased. An impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount and only to the extent that the assets' carrying value does not exceed the carrying amount that would be determined, net of amortization or depreciation, if no impairment loss had been recognized.

## **(I) INCOME TAXES**

Income tax expense comprises current and deferred tax. Income tax expense is recognized in earnings or loss except to the extent that it relates to items recognized directly in equity, in which case it is recognized in equity or in other comprehensive income.

Current tax is the expected tax payable or receivable on the taxable income or loss for the year, using tax rates enacted or substantively enacted at the reporting date, and any adjustment to taxes payable in respect of previous years.

Deferred tax is recognized in respect of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. Deferred tax is measured at the tax rates expected to be applied to the temporary differences when they are reversed, based on the laws enacted or substantively enacted by the reporting date. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset current tax liabilities and assets, and they relate to income taxes levied by the same tax authority on the same taxable entity, or on different tax entities, but they intend to settle current tax liabilities and assets on a net basis or their tax assets and liabilities will be realized simultaneously.

Deferred tax is not recognized for the following differences:

- The initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable income or loss; and
- Differences relating to investments in subsidiaries and jointly controlled entities to the extent that it is probable they will not be reversed in the foreseeable future.

A deferred tax asset is recognized to the extent that it is probable that future taxable income will be available against which deductible temporary differences can be utilized. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable the related tax benefit will be realized.

## **(J) PER SHARE AMOUNTS**

Basic per share amounts are calculated using the weighted average number of shares outstanding during the period.

## **(K) SHARE CAPITAL**

Common shares are classified as equity. When shares are sold, the consideration received, including directly attributable costs, net of any tax effect, is recognized as a change in share capital. The Company purchases shares for cancellation under its normal course issuer bid when one is in effect. The cost of purchasing shares for cancellation is first charged to share capital to the extent of the average carrying value of the common shares purchased and the excess is charged to retained earnings. No gain or loss is recognized in the consolidated statements of comprehensive income (loss) on the purchase, sale, issuance or cancellation of the Company's own equity instruments.

## (L) SHARE-BASED PAYMENTS

The Company has a long-term incentive plan (LTIP) under which participants are granted restricted share units (RSUs) and performance share units (PSUs). All amounts awarded are at the discretion of the Board of Directors. RSUs and PSUs have accompanying dividend-equivalent rights and, therefore, when dividends are declared on the common shares, additional RSUs and PSUs are issued. The plan's trustee will purchase common shares on the open market for the after-tax number of RSUs and PSUs vested with funds provided by the Company. The RSUs and PSUs are treated as equity-settled share-based payments and the related payroll taxes are treated as cash-settled share-based payments.

The compensation expense is recognized over the vesting period. For equity-settled share-based payments, the compensation expense is based on the number of RSUs and PSUs expected to vest and the market value of a common share of the Company on the grant date, with a corresponding increase to contributed surplus. For cash-settled share-based payments, the compensation expense is measured initially at the fair market value of the Company's shares at the grant date and subsequently adjusted for the additional shares granted based on the reinvestment of notional dividends and the market value of the shares at the end of each reporting period, with a corresponding increase to liabilities.

## (M) EMPLOYEE BENEFITS

Short-term employee benefit obligations are calculated on an undiscounted basis and are expensed as the related services are provided.

A liability is recognized for the amount expected to be paid under short-term cash bonus or profit-sharing plans if the Company has a current legal or constructive obligation to pay this amount as a result of past service provided by the employee and the obligation can be estimated reliably.

## (N) LEASES

Effective January 1, 2019 the Company adopted IFRS 16, *Leases*.

Upon identification of a lease contract, IFRS 16 requires the recognition of a right-of-use (ROU) asset and lease liability. At inception of a contract, the Company assesses whether a contract is or contains a lease. A contract is or contains a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. In order to perform this assessment, the Company determines whether: i) the Company has the right to obtain substantially all of the economic benefits from use of the asset through the period use; and ii) the Company has the right to direct the use of the identified asset. The term of the lease is determined as the non-cancellable period of a lease and periods in which there is reasonable certainty the Company will exercise an option to extend or cancel a lease. The Company considers all relevant facts and circumstances that would create an economic incentive to extend or terminate a lease.

At the commencement date of a lease, the Company measures lease liabilities at the present value of remaining lease payments, discounted using the interest rate implicit in a lease, if that rate can be readily determined. If not, the Company uses its incremental borrowing rate. Prospectively, the carrying amount of lease liabilities is increased by interest, offset by lease payments made. The initial cost of ROU assets is measured as the value of the lease liability, adjusted for any lease incentives received and initial direct costs. ROU assets are depreciated over the shorter of the lease term or the useful life of the asset and recognized as cost less any accumulated depreciation and impairment losses.

The most significant effect of the new standard will be the lessee's recognition of the initial present value of unavoidable future lease payments as ROU lease assets and lease liabilities on the statement of financial position, including those for most leases that were accounted for as operating leases. The Company has elected not to recognize assets and liabilities for leases with durations of 12 months or less and leases of low-value assets.

The total lease expense over the term of a lease will be unaffected by the new standard.

The presentation on the statement of earnings (loss) and other comprehensive income (loss) required by the new standard will result in the presentation of lease expenses as depreciation of ROU lease assets and financing costs arising from lease liabilities, rather than as a part of other selling, general and administrative costs.

The results of applying the current standard, although actual cash flows will be unaffected, are that the lessee's statement of cash flows will reflect increases in cash flows from operating activities (depreciation expense) offset by decreases in cash flows from financing activities (capital lease cash payment for principal).

The Company elected to apply the modified retrospective approach and adjusted its retained earnings. An adjustment of \$110,000 was made on January 1, 2019. Pulse used an incremental borrowing rate of 6.7 percent to calculate the initial present value of the ROU and lease liability.

#### (O) NET FINANCING COSTS OR INCOME

Financing expenses consist of interest expense on long-term debt, amortization of the deferred financing costs and the interest expense related to lease liabilities. All borrowing costs are recognized in earnings or loss using the effective interest rate method.

Interest income is earned from term deposits and discounted accounts receivable with payment terms.

## 4. REVENUE

### DATA LIBRARY SALES

There are three ways to disaggregate the Company's data library sales: transaction type, data type and geographically. Revenue fluctuations are a normal part of the seismic data library business, and data library sales can vary significantly year-over-year by transaction type, data type and geographically.

Traditional data library sales can occur at any time. This is due to the nearly continual changes in oil and natural gas industry conditions, increased demand for seismic data covering a specific area or play, and the timing of public offerings of petroleum and natural gas rights (land sales).

Transaction-based sales can also occur at any time. This is due to corporate merger and acquisition, joint venture and asset disposition activity by the Company's customers, which is unpredictable.

The following tables provide a summary of the Company's revenue disaggregated by type:

#### (A) TRANSACTION TYPE

Years ended December 31,	2019	2018
Traditional sales	19,607	9,127
Transaction-based sales	4,028	949
<b>Total data library sales</b>	<b>23,635</b>	10,076

Traditional data library sales are conducted under various types of sale contracts. These are classified as data library sales, library cards, commitment cards and review-and-possession agreements. The unearned portion of a contract's value is deferred until the Company's revenue recognition criteria are met, with data library sales revenue being recognized upon delivery of seismic data to the customer.

There are three main types of transaction-based sales: partnership or joint venture, corporate merger or acquisition and oil and gas asset or group sales.

The first type, the partnership or joint venture sale, occurs when an oil and natural gas asset holder elects to pool their expertise, capital and/or assets with one or more new participants to explore or develop a play. Any new technical or operational participant that wishes to view or interpret the seismic data must purchase a data licence from the Company.

The second type, a corporate merger or acquisition sale, is triggered when the seismic data is transferred to the new organization. The buyer has 30 days to determine whether they would like to pay a change-of-control fee to keep the data licence or return the data to the Company.

In the third type, the sale of an oil and gas asset or group of assets, the related seismic data licence is not transferable. No rights to the seismic data accrue to the buyer, and there are no terms of payment in the licence agreement. Should the buyer be interested in the Company's seismic data, they must license the data from the Company. This type of sale is nevertheless classified as transaction-type because the triggering event is a transaction.

The precise terms of individual licence agreements can vary greatly. Change-of-control fees and joint venture copy fees may not always be payable, and licence agreements may not always be non-assignable.

#### (B) DATA TYPE

Years ended December 31,	2019	2018
2D data sales	2,204	1,810
3D data sales	21,431	8,266
<b>Total data library sales</b>	<b>23,635</b>	10,076

The Company's data library consists of 2D and 3D seismic data. As 3D seismic licence contracts are generally larger than 2D seismic licence contracts, the percentage of seismic data library sales generated from 2D and 3D data sales fluctuates significantly depending on the number of 3D seismic sale contracts signed during a given period.

#### (C) GEOGRAPHICAL BREAKDOWN

Years ended December 31,	2019	2018
Alberta sales	15,467	8,692
British Columbia sales	7,440	402
Other area sales	728	982
<b>Total data library sales</b>	<b>23,635</b>	10,076

The Company's customers are currently and generally focusing on liquids-rich natural gas and light oil pools found primarily in a broad corridor running from northwest of Calgary, Alberta, along the Foothills of the Rocky Mountains to the British Columbia border, as compared to "dry" natural gas more often found in British Columbia, on Alberta's eastern prairies and in Saskatchewan and Manitoba. For the year ended December 31, 2019, 66 percent (2018 – 86 percent) of the data library sales were from data located in Alberta, 31 percent from British Columbia (2018 – 4 percent) and 3 percent from other areas (2018 – 10 percent).

#### (D) DEFERRED REVENUE

	2019	2018
Opening balance, January 1	867	925
<b>Plus:</b>		
Acquisition during the period (Note 16)	1,598	–
New data library contracts signed during the year	–	–
Interest from discounted accounts receivable	374	48
<b>Less:</b>		
Revenue recognized as data library sales during the year	841	–
Revenue recognized as other revenue	23	–
Revenue recognized as interest income	78	106
<b>Closing balance, December 31</b>	<b>1,897</b>	867

Deferred revenue includes the value of the unearned portion of contracts and is deferred until the Company's revenue recognition criteria are met. It also includes the interest related to discounted accounts receivable for which the interest revenue is recognized over time.

## 5. TRADE, OTHER AND LONG-TERM RECEIVABLES

As at December 31,	2019	2018
Data library trade receivables	3,875	3,307
Other	292	7
Total current receivables	4,167	3,314
Total long-term receivables	4,410	-

The Company recorded \$180,000 of bad debt expense in 2019 and \$nil in 2018.

The long-term receivables of \$4.4 million are due from two clients. They include a payment of \$2.0 million due in January 2021 from one client and payments of \$1.2 million due in 2021 and \$1.2 million due in 2022 from the other client.

## 6. SEISMIC DATA LIBRARY

	2019	2018
<b>Cost</b>		
Opening balance, January 1	445,036	444,974
Acquisitions through purchases and related cost (Note 16)	61,029	62
Closing balance, December 31	506,065	445,036
<b>Accumulated amortization</b>		
Opening balance, January 1	434,012	426,675
Amortization for the year	14,200	7,337
Closing balance, December 31	448,212	434,012
<b>Carrying amount, December 31</b>	<b>57,853</b>	11,024

On January 15, 2019 the Company acquired 100 percent of the shares of Seitel Canada Ltd. (Seitel) and its seismic data library. After reviewing the fair value of all the assets and liabilities acquired by the Company, an amount of \$61.0 million was allocated to the seismic data library. The details of the asset acquisition are provided in Note 16.

At December 31, 2019, the Company assessed its seismic data library CGUs for indicators of impairment as required under IFRS. It concluded there were no such indicators and no impairment test was performed.

## 7. ROU ASSETS AND LEASE LIABILITIES

The ROU assets and related lease liabilities are included in the tables below:

### ROU Assets

As at December 31,	2019	2018
Office lease, on adoption of IFRS 16, Leases on January 1, 2019	325	-
Acquisition during the period (Note 16)	1,385	-
Total ROU assets	1,710	-
<b>Less</b>		
Accumulated depreciation	(480)	-
ROU assets	1,230	-

## Lease Liabilities

As at December 31,	2019	2018
Office lease, on adoption of IFRS 16, Leases on January 1, 2019	325	–
Acquisition during the period (Note 16)	2,370	–
Repayments	(634)	–
Total lease liabilities	2,061	–
<b>Less</b>		
Current portion	(815)	–
Long-term portion	1,246	–

Under IFRS 16 the initial recognition of the ROU asset is usually equal to the liability. For the office lease acquired from Seitel in January 2019, no fair value was allocated to the ROU asset as this office was not in use by the Company and while it was available for sublease the Company was uncertain, given current market conditions, of finalizing a long-term sublease. The liabilities are calculated using the amount of basic rent as per the lease agreement. In the third quarter a sub-lease for the remainder of the term of the acquired office space was finalized, which will lead to a recovery of a portion of the monthly lease operating costs.

In 2019, the Company recognized \$151,000 (2018 – \$nil) of interest expense related to the lease liabilities.

## 8. LONG-TERM DEBT

	Senior term debt	Senior revolving credit facility	Subordinated debt	Total
Opening balance, January 1	–	–	–	–
Proceeds for Seitel acquisition	15,000	8,000	10,000	33,000
Other proceeds during the year	–	2,500	–	2,500
Mandatory repayments	(1,125)	–	–	(1,125)
Other repayments	–	(2,600)	–	(2,600)
Total long-term debt	13,875	7,900	10,000	31,775
Deferred financing cost				(264)
Total long-term debt, net of deferred financing cost				31,511
Less current portion of senior term debt				1,500
<b>Long-term portion</b>				<b>30,011</b>

There was no long-term debt at December 31, 2018.

On January 15, 2019 the Company acquired 100 percent of the shares of Seitel. The purchase consideration included an initial cash payment of \$53.6 million on closing, plus potential additional payments of up to \$5.0 million, in aggregate, within two years of closing. The amount of the additional payments was determined as 50 percent of sales revenue generated from the former Seitel database prior to December 31, 2020. In April 2019, the Company repaid \$1.1 million to Seitel for sales realized in the first quarter of 2019. In July 2019, the Company repaid the remaining \$3.9 million to Seitel for sales realized in the second quarter of 2019.

In connection with the acquisition of Seitel (Note 16), the Company amended and restated its syndicated credit agreement. The facility is comprised of \$15 million in term debt, all of which was utilized for the acquisition, and a \$30.0 million revolving facility, \$8.0 million of which was drawn for the acquisition. The facility specifies repayment terms, interest rates and financial covenants that are described below.

Significant terms of the credit facility are:

- Interest on the term debt and the revolving facility is calculated based on the syndicate lead lender's prime rate, bankers' acceptance rate or LIBOR, plus an applicable margin based on the covenant ratio of total debt to adjusted earnings before interest, tax, depreciation and amortization (adjusted EBITDA) following an eight-tier margin structure;
- The facility includes an accordion feature allowing the Company to increase the facility's size up to an additional \$25 million, subject to the lenders' consent;
- \$1.5 million aggregate annual principal payments on the term debt and no principal repayments required on the revolving facility, with voluntary prepayments permitted in whole or part at any time, without premium or penalty;
- Three-year term until January 15, 2022, with an extension of up to one year available on the revolving facility on January 15 of every year with the approval of the lenders. If the extension is not granted, any outstanding amounts will be payable on the then-current applicable maturity date;
- The Company pays a standby fee based on the daily undrawn balance of the revolving portion of the credit facility and its total debt to adjusted EBITDA ratio following an eight-tier margin structure. At December 31, 2019 the applicable margin and standby fee remained unchanged at the level 3 of rates available under the facility; and
- The credit facility is secured by a charge on all of the assets of the Company and its material subsidiaries.

The credit facility also includes the following two financial covenants:

#### 1) MAXIMUM SENIOR DEBT TO ADJUSTED EBITDA RATIO

The senior debt to adjusted EBITDA ratio shall not be greater than 3.5:1 on December 31, 2019 and shall decrease in steps to 3:1 for fiscal quarters ending December 31, 2020 and thereafter.

#### 2) MINIMUM INTEREST COVERAGE RATIO AND MINIMUM FIXED CHARGE COVERAGE RATIO

On any date when the senior debt to adjusted EBITDA ratio has been lower than 2:1 for two consecutive quarters, the minimum interest coverage ratio, defined as the ratio of adjusted EBITDA to interest expense, shall not be less than 3:1.

On any date when the senior debt to adjusted EBITDA ratio has been equal to or higher than 2:1 for two consecutive quarters, the fixed charge coverage ratio replaces the interest coverage ratio.

The fixed charge coverage ratio is equal to adjusted EBITDA less unfunded capital expenditures, cash taxes and permitted cash distributions divided by the sum of scheduled principal repayments and interest expense paid in cash, and shall not be less than 1.2:1.

Senior debt is total debt less subordinated debt. Total debt is determined on a consolidated basis and in accordance with IFRS.

Adjusted EBITDA is to be calculated on a trailing 12-month basis and is defined as earnings or loss before interest, income taxes, depreciation and amortization, plus extraordinary losses, non-cash losses and expense charges, and any other unusual or non-recurring cash charges, expenses or losses consented to by the lenders, less participation survey revenue, extraordinary gains and non-cash gains and income. Adjusted EBITDA is to be adjusted for acquisitions or dispositions to reflect such acquisition or disposition as if it occurred on the first day of such calculation period.

Further, the Company has also entered into a five-year subordinated debt agreement for \$10 million. It has no requirement to repay the principal prior to the end of the term. Under the agreement's terms, the loan will accrue interest daily at a rate of 10 percent per annum, payable quarterly at the end of each quarter.

Interest and standby fees on the syndicated revolving bank loan are calculated based on the syndicate lead lender's prime rate, bankers' acceptance rate or LIBOR, plus an applicable margin based on the covenant ratio of total debt to adjusted EBITDA. At December 31, 2019 the applicable interest rate on the long-term debt was 4.7 percent (December 31, 2018 – 4.45 percent).

At December 31, 2019 the senior debt to adjusted EBITDA ratio was 1.24:1 and the interest coverage ratio was 7.49:1. The Company was in compliance with all covenants at December 31, 2019.

In 2019, the company incurred the following financing expenses related to the long-term debt.

	Interest expense	Standby fees	Total
Senior debt and senior revolving credit facility	1,146	153	1,299
Subordinated debt	959	–	959
Total interest and standby fees	2,105	153	2,258
Financing charges			146
<b>Total financing expenses</b>			<b>2,404</b>

## 9. DEFERRED TAX ASSETS AND LIABILITIES

### (A) UNRECOGNIZED DEFERRED TAX ASSETS

As at December 31,	2019	2018
Foreign exploration and development expense	214	257
Capital losses	352	413
	<b>566</b>	670

Deferred tax assets for these items have not been recognized because utilization against future taxable profits is not probable.

### (B) RECOGNIZED DEFERRED TAX ASSETS AND LIABILITIES

Deferred tax assets and liabilities are attributable to the following:

As at December 31,	2019	2018
<b>Deferred income tax assets:</b>		
Financing fees	12	–
Resource expenditures	148	181
Long-term incentive plan	142	120
	<b>302</b>	301
<b>Deferred income tax liability:</b>		
Seismic data library and participation surveys	1,409	1,975
<b>Net deferred income tax liabilities</b>	<b>1,107</b>	1,674

**(C) MOVEMENT IN TEMPORARY DIFFERENCES DURING THE YEAR**

	Deferred tax liabilities (assets) January 1, 2018	Recognized in income	Recognized in equity	Deferred tax liabilities (assets) December 31, 2018
Resource expenditures	(179)	(2)	–	(181)
Financing costs	(5)	5	–	–
Long-term incentive plan	(311)	96	95	(120)
Seismic data library	3,436	(1,461)	–	1,975
	2,941	(1,362)	95	1,674

	Deferred tax liabilities (assets) January 1, 2019	Recognized in income	Recognized in equity	Deferred tax liabilities (assets) December 31, 2019
Resource expenditures	(181)	33	–	(148)
Financing costs	–	(12)	–	(12)
Long-term incentive plan	(120)	(4)	(18)	(142)
Seismic data library	1,975	(566)	–	1,409
	1,674	(549)	(18)	1,107

**(D) RECONCILIATION OF EFFECTIVE TAX RATE**

Income tax expense differs from the amount that would be computed by applying the basic combined federal and provincial statutory income tax rate to earnings before income taxes. The reasons for the differences are as follows:

Years ended December 31,	2019	2018
Loss before income tax	(2,185)	(2,408)
Combined federal and provincial income tax rate	26.5%	27%
Expected income tax reduction	(579)	(650)
Effects of differences:		
Non-deductible expenses	47	17
Adjustment in respect of prior years	9	(18)
Change in valuation allowance	(24)	(27)
Permanent difference related to the seismic data library acquired in January 2019	1,992	–
Permanent difference related to IFRS 16, Leases	(66)	–
Change in Alberta future corporate income tax rates	(153)	–
<b>Actual income tax expense (reduction)</b>	<b>1,226</b>	<b>(678)</b>

**10. EQUITY**

The Company's authorized share capital consists of an unlimited number of common and an unlimited number of preferred shares, issuable in series. The shares have no stated par value. No preferred shares have been issued. All common shares are entitled to receive dividends as declared and are entitled to one vote per share at Company meetings.

The Company did not renew its normal course issuer bid upon its expiry in December 2018; therefore in the 12 months ended December 31, 2019 no shares were purchased. For the 12 months ended December 31, 2018, 227,500 shares were purchased and cancelled at a total cost of \$673,000.

## 11. SHARE-BASED PAYMENTS

The Company has an LTIP for employees, officers and Directors designed to align its long-term incentive compensation with its performance and to increase individual share ownership.

The LTIP awards consist of RSUs and PSUs, with Directors being granted RSUs only. Upon vesting, each RSU and PSU entitles the holder to one common share of the Company. RSUs and PSUs have accompanying dividend-equivalent rights and, therefore, additional RSUs and PSUs are issued to reflect dividends declared, if applicable, on the common shares.

In determining the amount of equity-settled share-based compensation related to PSUs, management makes estimates about future results and vesting criteria. It is reasonably possible that future outcomes could differ from the estimates, which are based on current knowledge, and require a material adjustment to the share-based compensation expense recorded in future periods. The impact of any change in the number of PSUs expected to vest is recognized in the period the estimate is revised.

On March 31, 2019 184,657 RSUs and 248,296 PSUs were eligible to vest. The Company's performance in 2018 did not meet the predetermined performance benchmarks and, consequently, no PSUs vested on March 31, 2019. RSUs vest automatically based upon time and, consequently, all of the eligible RSUs vested automatically on March 31, 2019.

To satisfy its obligation, in April 2019 the Company provided \$266,000 to the plan's trustee to purchase common shares on the open market for the total after-tax number of cash- and equity-settled RSUs that vested on March 31, 2019. The related payroll taxes of \$191,000 were paid in May 2019 to settle fully the accrued cash-settled portion of the share-based payment liabilities.

During the year ended December 31, 2019, the Company recognized \$534,000 (2018 – \$378,000) in compensation expense related to the LTIP in salaries, internal commissions and benefits on the statement of comprehensive loss. The equity-settled portion was \$284,000 (2018 – \$337,000).

At December 31, 2019 the obligation related to the cash-settled portion of the LTIP was \$259,000 (December 31, 2018 – \$200,000) with \$139,000 (December 31, 2018 – \$108,000) included in accounts payable and accrued liabilities and \$120,000 (December 31, 2018 – \$92,000) included in other long-term payable.

The following summarizes activity in the Company's LTIP during the years ended December 31, 2019 and 2018:

RSUs	2019	2018
Outstanding, January 1	528,670	553,666
Vested	(184,657)	(173,850)
Granted	224,678	178,928
Cancelled or forfeited	(15,116)	(30,074)
<b>Outstanding, December 31</b>	<b>553,575</b>	528,670
PSUs	2019	2018
Outstanding, January 1	687,938	707,071
Vested	–	(65,508)
Granted	280,435	206,725
Cancelled or forfeited	(263,411)	(160,350)
<b>Outstanding, December 31</b>	<b>704,962</b>	687,938

On March 31, 2020, 186,658 RSUs will vest automatically and, based on the Company's performance in 2019 and the predetermined performance measures, none of the PSUs will vest. In April 2020, the Company will settle its obligation to deliver the common shares by providing funds to the independent LTIP trustee to purchase the shares on the open market.

## 12. EARNINGS PER SHARE

### (A) BASIC EARNINGS PER SHARE

The calculation of basic earnings per share at December 31, 2019 was based on the net loss attributable to common shareholders of \$3.4 million for the year ended December 31, 2019 (2018 – loss of \$1.7 million) and a weighted average number of common shares of 53,793,317 (2018 – 53,838,106), calculated as follows:

	2019	2018
Common shares outstanding, January 1	53,793,317	54,020,817
Effect of shares issued, purchased and cancelled	–	(182,711)
<b>Weighted average number of common shares for the year ended December 31</b>	<b>53,793,317</b>	<b>53,838,106</b>

### (B) DILUTED EARNINGS PER SHARE:

The Company does not have any dilutive securities.

## 13. SALARIES, INTERNAL COMMISSIONS AND BENEFITS

Years ended December 31,	Note	2019	2018
Salaries and benefits		2,498	2,607
Internal commissions		319	122
Registered retirement savings plan contributions		127	110
Short-term incentives		160	259
Long-term incentives	11	534	378
Acquisition bonus		700	–
<b>Total salaries, internal commissions and benefits</b>		<b>4,338</b>	<b>3,476</b>

## 14. OTHER SELLING, GENERAL AND ADMINISTRATIVE COSTS

Years ended December 31,	2019	2018
External commissions	52	68
Occupancy costs	311	390
Office and general costs	340	391
Information technology	343	382
Reprocessing and data storage	165	206
Directors' fees and corporate costs	369	384
Professional fees	282	209
Bad debt expense	180	–
<b>Total other selling, general and administrative costs</b>	<b>2,042</b>	<b>2,030</b>

## 15. NET CHANGE IN NON-CASH OPERATING WORKING CAPITAL

Years ended December 31,	2019	2018
Trade and other receivables	(853)	2,222
Prepaid expenses	7	(19)
Long-term receivable	(4,410)	–
Accounts payable and accrued liabilities	162	(1,348)
Deferred revenue	1,030	(58)
Other long-term payable	28	(116)
Others	217	(45)
<b>Net change in non-cash operating working capital</b>	<b>(3,819)</b>	636

## 16. SEITEL CANADA LTD. (SEITEL) ACQUISITION

On January 15, 2019, the Company acquired 100 percent of the shares of Seitel. The Company accounted for the transaction as an asset acquisition. As such, the assets acquired were recognized at cost based on their relative fair values. The Company determined the estimated fair values by reviewing and considering relevant information, including but not limited to information supplied by the vendor, quoted market prices and estimates made by management. The purchase price at the date of acquisition was allocated to net assets acquired as follows:

### Assets

Cash and cash equivalents	715
Trade and other receivables	420
Prepaid expenses and deposits	211
Seismic data library	61,029
ROU assets	1,385
<b>Total assets</b>	<b>63,760</b>

### Liabilities

Accounts payable and accrued liabilities	833
Deferred revenue	1,598
Lease liabilities	2,370
<b>Total liabilities</b>	<b>4,801</b>

**Net assets acquired** 58,959

Transaction costs of \$144,000 associated with the acquisition were capitalized to the seismic data library.

During the year ended December 31, 2019, the Company incurred \$2.7 million of restructuring costs. See the below table for details.

### Restructuring costs

Years ended December 31,	2019	2018
Severance, salaries and benefits	1,622	–
Occupancy costs	471	–
Office and general costs	362	–

## 17. FINANCIAL INSTRUMENTS

The Company's risk management policy objectives include the long-term management of its business activities and, wherever possible, mitigation of the associated business risks. The Company has exposure to the following risks from its use of financial instruments:

- Credit risk;
- Liquidity risk; and
- Market risk.

### (A) RISK MANAGEMENT

The Board of Directors has overall responsibility for the establishment and oversight of the Company's risk management framework.

The Company's risk management policies are established to identify and analyze the risks faced by the Company, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. The Company, through its training and management standards and procedures, aims to develop a disciplined and constructive control environment in which all employees understand their roles and obligations.

The Audit and Risk Committee oversees how management monitors compliance with the Company's risk management policies and procedures, and reviews the adequacy of the risk management framework in relation to the risks faced by the Company. Reviews of risk management controls and procedures are performed, the results of which are reported to the Board of Directors.

### (B) CREDIT RISK

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations and arises principally from the Company's accounts receivable.

The Company is exposed to credit risk in connection with data sales and participation surveys with its customers. The Company's exposure to credit risk is influenced mainly by each customer's individual characteristics. The nature of the Company's customer base, including the default risk of the industry in which customers operate, has an influence on credit risk. As the Company operates to a large extent in the oil and natural gas industry, nearly all of the trade receivables and long-term receivables relate to customers from this industry.

The effective monitoring and control of credit risk is a core competency of the Company. Each new customer is analyzed individually for creditworthiness, including credit reference checks, before payment and delivery terms and conditions such as credit limits are offered. Customer accounts are monitored and accounts receivable aging is regularly reviewed. Certain customers have signed agreements with the Company that provide for extended payment terms. The Company's credit risk increases in these arrangements due to their longer time-frame. The risk is mitigated by attempting to limit these arrangements to major oil and natural gas companies which have long operating histories and adequate resources to fulfill their commitments.

The majority of the Company's customers have been doing business with it for many years, and insignificant losses have occurred in the past. The Company does not require customers to provide collateral.

#### EXPOSURE TO CREDIT RISK

The carrying amount of financial assets represents the maximum credit exposure. The maximum exposure to credit risk at the reporting date was the value of accounts receivable of \$8.8 million. The Company has a significant concentration of customers in the oil and natural gas industry, with the majority located in Alberta. At December 31, 2019, 88 percent of total accounts receivable were due from two customers. For the year ended December 31, 2019, approximately 62 percent of the Company's data library sales were attributable to four customers.

### Expected credit loss (ECL) assessment for individual customers

The following table provides information about the exposure to credit risk and ECLs for trade receivables from individual customers as at December 31, 2019 and 2018.

	2019		2018	
	Gross	Impairment	Gross	Impairment
Current and long-term	8,318	-	3,048	-
Past due 31-60 days	26	-	266	-
Past due 61-90 days	26	-	-	-
More than 90 days	387	180	-	-
<b>Total</b>	<b>8,757</b>	<b>180</b>	3,314	-

The current accounts receivable of \$8.3 million in the table above include \$7.7 million from two clients benefiting from extended payment terms. All amounts are due during 2020, 2021 and 2022.

As at the reporting date, the Company believes that all accounts but one are collectible, based on historical payment behaviour and extensive analysis of customers' underlying credit ratings.

#### Movements in the allowance for impairment in respect of trade receivables

The movement in the allowance for impairment in respect of trade receivables during the year was as follows:

	2019	2018
Balance at January 1	-	-
Allowance for impairment booked during the year	180	-
<b>Balance at December 31</b>	<b>180</b>	-

The allowance for impairment of trade receivables is related to one overdue account. In October 2018, the Company licensed data to a customer. The original contract amount was for \$468,000 and was due in two equal payments. The first payment was received on time as per the payment terms. The second payment was due in March 2019. The customer made partial payments in October and December 2019. Management believes that this account represents a collection risk and has recorded an allowance for impairment for the full balance of the account.

The Company has not recorded a bad debt expense since 2012. Accounts receivable over 90 days are monitored and assessed for impairment. Those accounts are evaluated on a case by case basis using information received from the customer and market information. The Company has one other account due for more than 90 days but believes that this account is collectible.

### (C) LIQUIDITY RISK

Liquidity risk is the risk that the Company will encounter difficulty in meeting the obligations associated with its financial liabilities that are settled in cash or another financial asset. The Company's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under normal and stressed conditions, without incurring unacceptable losses or risking damage to its reputation.

The Company regularly monitors its cash flow and funding options available in the capital markets, as well as trends in the availability and costs of such funding, with a view to maintaining financial flexibility and limiting repayment risks. The Company does not believe that it will encounter difficulty in meeting its financial obligations. Consolidated cash flow information, including a projection for the remainder of the year where applicable, is presented quarterly to the Audit and Risk Committee, which aids in planning to ensure that the Company has sufficient cash to meet expected operational expenses, including the servicing of financial obligations.

Beyond cash on hand of \$1.4 million and total working capital of \$596,000 at December 31, 2019 the Company had \$22.1 million available for future draws on its revolving credit facility, with a further \$25.0 million available via an accordion feature, subject to the banking syndicate's approval.

The following are the contractual maturities of financial liabilities at December 31, 2019:

	Carrying amounts	2020	2021	2022	2023 and thereafter
Long-term debt	31,775	1,500	1,500	18,775	10,000
Long-term debt interest	6,055	2,023	1,953	1,037	1,042
Accounts payable	1,138	1,138	–	–	–
Long-term payable	120	–	120	–	–
<b>Total</b>	<b>39,088</b>	<b>4,661</b>	<b>3,573</b>	<b>19,812</b>	<b>11,042</b>

#### (D) MARKET RISK

Market risk is the risk that changes in market prices will affect the Company's income or the value of its holdings of financial instruments. The objective of market risk management is to manage and control market risk exposures within acceptable parameters, while optimizing the return.

##### (I) COMMODITY PRICE RISK

The Company is not directly exposed to commodity price risk as it does not have any contracts that are directly based on commodity prices. A change in commodity prices, specifically oil and natural gas prices, could have a material impact on the Company's customers' cash flows and could therefore affect the level of seismic data library sales and participation surveys. Commodity prices are affected by many factors, including supply and demand. The Company has not entered into any commodity price risk contracts. Given that this is an indirect influence, the financial impact on the Company of changing oil and natural gas prices is not reasonably determinable.

##### (II) INTEREST RATE RISK

The Company's interest rate risk exposure is mainly related to long-term debt. The Company is exposed to interest rate cash-flow risk on its floating-rate long-term debt as described in note 8. Changes in market interest rates will cause fluctuations in future interest payments.

The Company earns minimal interest income on its cash balances.

A change of 100 basis points in interest rates for the year ended December 31, 2019 would have increased or decreased equity and earnings or loss by \$303,000 in 2019 (2018 – \$nil), assuming all other variables remained constant.

#### (E) FAIR VALUES

The fair values of cash and cash equivalents, accounts receivable and accounts payable approximate their carrying amount largely due to the short-term maturities of these instruments.

## 18. CAPITAL MANAGEMENT

The Company considers its capital structure to include shareholders' equity and long-term debt.

As at December 31,	2019	2018
Shareholders' equity	31,973	35,238
Long-term debt	31,511	–
<b>Total capitalization</b>	<b>63,484</b>	35,268

The Company's primary objective when managing capital is to preserve its ability to execute its long-term growth plan of significantly increasing the size of the seismic data library, so that it can maximize revenue and, ultimately, shareholder value. Sales generated from the seismic data library provide the Company with high levels of cash, and its most significant expense is non-cash amortization. Due to this, the Company has been able to repay long-term debt and continue to fund data library growth.

The Company requires flexibility in managing the capital structure so that it can take advantage of opportunities to raise additional capital as opportunities for data acquisitions or participation surveys arise. The Company uses a combination of debt and equity and relies on key internal measures such as the long-term debt to trailing twelve-month (TTM) cash EBITDA ratio and the long-term debt to equity ratio to forecast and structure its capital requirements. From time to time the Company purchases its own shares on the market through its NCIB, the timing of which depends on a number of factors including competing capital allocation opportunities under review, market volume activity and market prices.

Cash EBITDA is defined by the Company as earnings before interest, taxes, depreciation and amortization less participation survey revenue, plus non-cash and non-recurring expenses. Cash EBITDA is a measure that does not have any standardized meaning prescribed by IFRS and is therefore unlikely to be comparable to similar measures presented by other issuers.

The long-term debt to TTM cash EBITDA ratio is calculated as long-term debt at the end of the period, divided by 12-month trailing cash EBITDA.

The total long-term debt to annual cash EBITDA ratio is calculated as follows:

Years ended December 31,	2019	2018
Total long-term debt at year-end	31,511	–
<b>Divided by:</b>		
Net loss	(3,411)	(1,730)
<b>Less:</b>		
Lease payments treated as capital lease	(85)	–
Warehouse revenue	(425)	–
<b>Plus:</b>		
Net financing costs	2,452	(318)
Income tax expense (reduction)	1,226	(678)
Depreciation	645	71
Amortization of seismic data library	14,200	7,337
Equity-settled share-based compensation	284	337
Restructuring costs	2,663	–
Loss on disposition of capital assets	8	18
Annual cash EBITDA	17,557	5,037
<b>Total long-term debt to annual cash EBITDA ratio</b>	<b>1.79:1</b>	0.00:1

The total long-term debt to equity ratio is calculated using the total long-term debt balance, net of debt financing costs, divided by total equity, as follows:

As at December 31,	2019	2018
Total long-term debt, net of debt financing cost	31,511	–
Divide by: total equity	31,973	35,238
<b>Total long-term debt to equity ratio</b>	<b>0.99:1</b>	0.00:1

As the balance of the long-term debt was nil at December 31, 2018, the long-term debt to TTM cash EBITDA ratio and long-term debt to equity ratio were 0.00:1 at December 31, 2018.

As discussed in note 8, the Company is subject to debt covenants on its long-term debt. The Company was in compliance with all covenants.

There were no changes in the Company's approach to capital management during the year.

## 19. LEASES AND OTHER COMMITMENTS

The Company leases office space and office equipment under operating leases. In January 2017, the Company signed a sublease agreement for new office space. This sublease expires in March 2023.

With the acquisition of Seitel, the Company has two additional leases for office space and data storage. These lease agreements expire in April 2022 and November 2022.

During the year ended December 31, 2019, a total of \$708,000 (2018 – \$388,000) was recognized in selling, general and administrative and restructuring costs in respect of leases.

Obligations for seismic data services contracts include geophysical services such as digitization and data storage.

During the year ended December 31, 2019, \$170,000 (2018 – \$206,000) was recognized in selling, general and administrative expenses in respect of seismic data services.

The following table represents expected total lease payments and minimum payments under seismic data services contracts:

	2020	2021	2022	2023	2024 and thereafter
Leases	1,279	1,279	934	76	–
Seismic data services	111	–	–	–	–
<b>Total</b>	<b>1,390</b>	<b>1,279</b>	<b>934</b>	<b>76</b>	<b>–</b>

## 20. RELATED-PARTY TRANSACTIONS

The Company has a related-party relationship with its Board of Directors and with key management personnel.

### (A) KEY MANAGEMENT PERSONNEL COMPENSATION

In addition to their salaries, the executive officers participate in the Company's short-term incentive cash-bonus plan and LTIP (refer to note 11).

Key management personnel compensation comprised:

Years ended December 31,	2019	2018
Fixed salary	822	822
Short-term employee benefits	70	70
Short-term incentive plan	104	650
LTIP	217	371
Acquisition bonus	560	–
	<b>1,773</b>	<b>1,913</b>

### (B) TRANSACTIONS WITH DIRECTORS

Directors also participate in the Company's LTIP (refer to note 11).

The remuneration of the Directors is as follows:

Years ended December 31,	2019	2018
Directors' fees	206	191
LTIP	65	98
	<b>271</b>	<b>289</b>

# CORPORATE INFORMATION

Pulse is a market leader in the acquisition, marketing and licensing of 2D and 3D seismic data to the western Canadian energy sector. Pulse owns the largest licensable seismic data library in Canada, currently consisting of approximately 65,310 net square kilometres of 3D seismic and 829,207 net kilometres of 2D seismic. The library extensively covers the Western Canada Sedimentary Basin where most of Canada's oil and natural gas exploration and development occur.
